## L-Series Start-Stop Interface

Magnetostrictive Linear Position Sensors

Document Part No.  
101005

***Superior Precision***

### High Pressure Stainless Steel Sensor with 100°C Electronics

- Linear, Absolute Measurement
- Contactless Sensing with Highest Durability
- Rugged Industrial Sensor, EMC shielded and CE certified
- Linearity Tolerance better 0,02 %
- Repeatability 0,001 %
- Start/Stop Pulse Transmission
- Operating Temperature up to 100° C

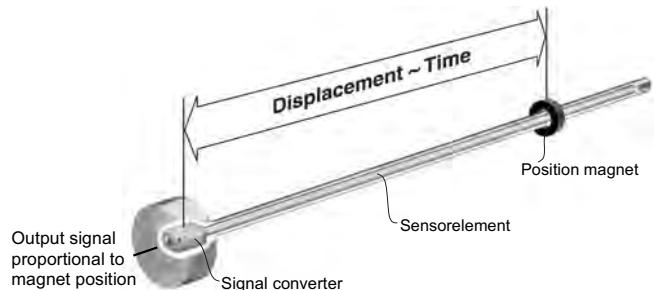

ISO 9001  
CERTIFIED

...the measurable difference

### Magnetostriction

The **absolute Temposonics®** linear position sensors are based on the **MTS** developed *magnetostrictive* measurement principle. That combines various magneto-mechanical effects and uses the physical highly precise speed-measurement of an ultrasonic wave (torsion pulse in its sensor element) for position detecting.

Sensor integrated signal processing transforms the measurements directly into market standard outputs. The *contactless* principle - an external movable magnet marks the position - eliminates the wear, noise and erroneous signal problems and guarantees the best durability without any recalibration.

**Operating principle:**  
**Magnetostrictive ultrasonic speed measurement = Position sensing**

### Technical Data

#### Input

Measured variable Displacement  
Measuring range 50 - 3000 mm

#### Output

Start-Stop pulse RS 422 differential signal

#### Accuracy

- Resolution 0,1 mm / 0,01 mm / 0,005 mm (controller dependent)
- Linearity < ± 0,02 % F.S. (Minimum ± 50 µm)
- Repeatability < ± 0,001 % F.S.
- Update frequency Controller dependent

#### Operating conditions

Magnet speed Any  
Operating pressure 350 bar (530 bar peak pressure)  
Operating temperature -40 °C ... +100 °C  
Dew point, humidity 90% rel. humidity, no condensation  
Sealing IP67 if mating connector is correctly fitted  
Shock test 100 g single hit, IEC-Standard 68-2-27  
Vibration test 10 g / 10 - 2000 Hz, IEC-Standard 68-2-6  
Norms, EMC test Electromagnetic emission EN 50081-1  
Electromagnetic immunity EN 50082-2  
EN 61000, Criteria A, CE-qualified

#### Form factor, material

Sensor head Aluminum  
Rod with flange Stainless steel 1.4301 / AISI 304  
Position transmitter Ring- or U-Magnet

#### Installation

Mounting position Any  
Rod Threaded flange M18 x 1,5 or 3/4" -16 UNF-3A, hex nut M18  
Magnet Mounting plate and screws: amagnetic

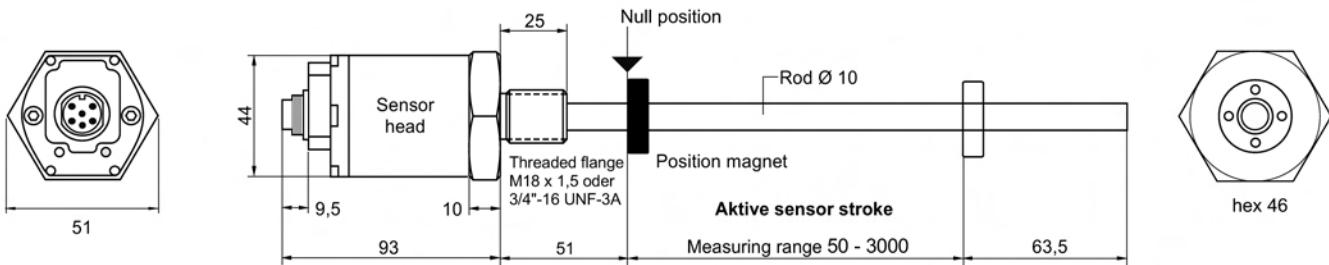

#### Electrical connection

Connection type 6 pin connector M16 or 2 m cable outlet  
Input voltage 24 VDC (-15 / +20 %)  
Current consumption 100 mA typical  
Ripple < 1 % peak-peak  
Electric strength 500 V (DC ground to machine ground)

## Formfactor

The extremely robust sensor, ideal for continuous operation under harshest industrial conditions is completely modular in mechanics and electronics design.

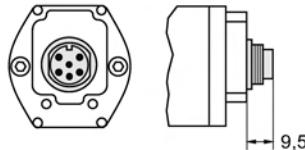

- A rod-shaped sensor housing protects the sensing element in which gives rise to the measurement signal.
- The sensor head accommodates the complete modular electronics interface with active signal conditioning. Double encapsulation ensures high operating safety and optimum EMC protection.
- The position transmitter, a permanent magnet - fixed at the mobile machine part - drives contactlessly over the sensor's stroke and starts measuring through the housing wall.

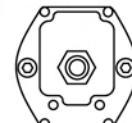

All dimensions in mm

## Connection types

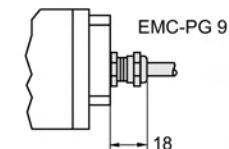

**Connector outlet D600**  
6 pin male connector M16

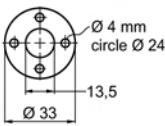

**Cable outlet R002**  
Max. operating temperature: 70° C  
6 wires PVC cable, 3 x 2 x 0,14 mm<sup>2</sup>  
shield, cable-Ø 6 mm, bending radius  
50 mm at fixed installation

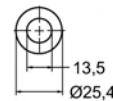

**Cable outlet T002**  
Max. operating temperature: 150° C  
8 wires Teflon cable, 4 x 2 x 0,25 mm<sup>2</sup>  
shield, cable-Ø 7,5 mm, bending radius  
75 mm at fixed installation

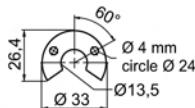

## Available position magnets (pls. order separately)

**Ring magnet OD33 (standard)**  
Part No. 201 542-2  
Height: 8 mm  
Composite PA-ferrite-GF20  
weight ca. 14 g, operating  
temperature -40...+100° C

**Ring magnet OD25,4**  
Part No. 400 533  
Height: 8 mm  
Composite PA-Ferrite,  
weight ca. 10 g, operating  
temperatur -40...+100° C

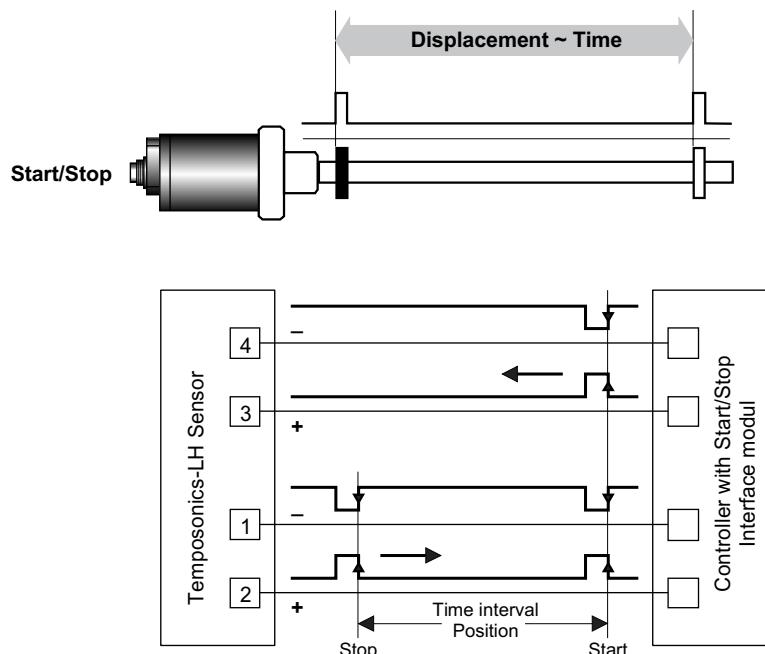

**U-magnet OD33**  
Part No. 251 416-2  
Height: 8 mm  
Composite PA-ferrite-GF20  
weight ca. 11 g, operating  
temperature -40...+100° C

### Start/Stop output

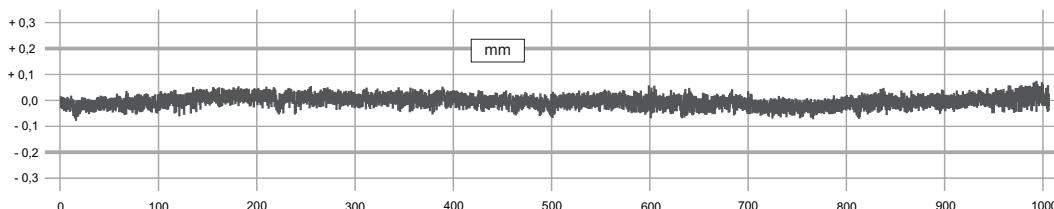

Digital Temposonics-LH is equipped with a start/stop output. The sensor requires a start signal from an external indicator in the control system and returns a signal corresponding to the magnet position. The time elapsed between the two signals is proportional to the magnet position, i.e. to the displacement.

Time measurement is by the controller and used for calculating the position value.

### Logic diagram

### Linearity protocol

Sensor Temposonics-LH, stroke length 1000 mm

Tolerance allowed:  $\pm 0,2$  mm

Tolerance measured:  $\pm 0,09$  mm uncorrected

## Variable mounting in any position

### Rod

Mount the sensor directly via flange or by means of the nut packed with the sensor. If possible, non-magnetizable material should be used for the sensor mounting component. Taking the mounting dimensions shown right into account is indispensable.

### Position magnet

To have a neat magnetic field for measurement, antimagnetic material must be used for the position magnet mounting component (screws, spacers, etc.).

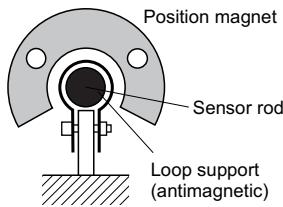

### Horizontal installation

With horizontal mounting, sensors with a measuring length from 1 meter must be provided with mechanical support at the rod end, and with supports distributed regularly over the length if the measuring rod is very long. In this case, open ring magnets must be used as position transmitter.

### Hydraulic sealing

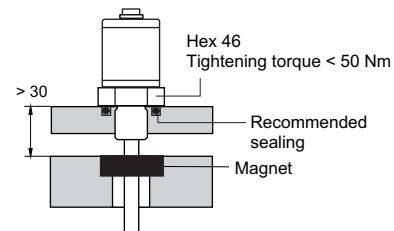

Recommended is sealing of the flange facing with an O-Ring (e.g. 22,4 x 2,65) in a cylinder cover nut.

### Sample: Sensor support

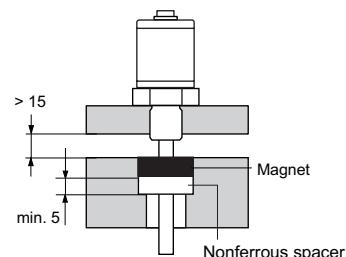

### Minimum assembly distance

#### 1. Non-magnetizable material

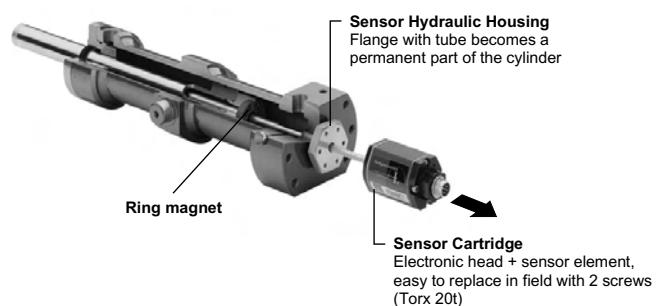

#### 2. Magnetizable material

## Cylinder installation

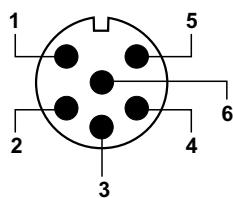

Due to form factor, a rod sensor is excellently suited for direct stroke measurement in fluid cylinders. The magnet, mounted on the piston bottom, drives contactlessly along the stroke and marks exactly the position through the rod wall - independent of the used hydraulic fluid - that guarantees a longlife and trouble-free operation.

The sensor cartridge can be removed from the flange and rod housing while still installed in the cylinder. This procedure allows quick and easy sensor cartridge replacement, without the loss of hydraulic pressure.

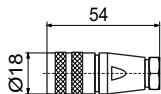

### Notes

- Magnet must not slide along the sensor tube
- Bore in the piston rod and type of sealing depends on pressure and piston velocity (13 mm min.)
- Do not exceed peak pressure
- Protect sensor rod from wear

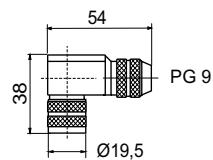

**Wiring**

Pin	Cable color	Function
1	gray	Stop (-)
2	pink	Stop (+)
3	yellow	Start (+)
4	green	Start (-)
5	brown	+ 24 Vdc ( $\pm 10\%$ )
6	white	DC Ground (0 V)

View:  
Front face of sensor plug  
rear of mating connector

**Mating connectors** (recommended, not on delivery)

6 pin female connector M16, PG 7  
**Part No. STC0 9131 D**

6 pin female connector M16, PG 9  
**Part No. STC0 9131 D06 PG9**

Housing: Zinc, nickel plated  
Termination: Solder  
Contact insert: Silver plated  
Cable clamp: PG 7 / 9
