R-Series V RD5 EtherCAT®

Magnetostrictive Linear Position Sensors

- Space-saving installation due to detached sensor electronics housing
- Distance between sensor rod and sensor electronics up to 20 m (65.6 ft.)
- Field adjustments and diagnostics using the TempoLink® and TempoGate® smart assistants

V
THE NEW GENERATION

MEASURING TECHNOLOGY

The absolute, linear position sensors provided by Temposonics rely on the company's proprietary magnetostrictive technology, which can determine position with a high level of precision and robustness. Each Temposonics® position sensor consists of a ferromagnetic waveguide, a position magnet, a strain pulse converter and supporting electronics. The magnet, connected to the object in motion in the application, generates a magnetic field at its location on the waveguide. A short current pulse is applied to the waveguide. This creates a momentary radial magnetic field and torsional strain on the waveguide. The momentary interaction of the magnetic fields releases a torsional strain pulse that propagates the length of the waveguide. When the ultrasonic wave reaches the beginning of the waveguide it is converted into an electrical signal. Since the speed of the ultrasonic wave in the waveguide is precisely known, the time required to receive the return signal can be converted into a linear position measurement with both high accuracy and repeatability.

R-SERIES V RD5 EtherCAT®

The Temposonics® R-Series V brings very powerful sensor performance to meet the many demands of your application. The sensor RD5 is the version of the R-Series V with a detached sensor electronics. The main advantages of the version RD5 are:

- 
Space-saving installation
The detached sensor electronics allow space-saving installation of the compact measuring rod.
- 
Great distance
The sensor electronics can be mounted up to 20 m (65.6 ft.) away from the sensor rod. This offers more mounting locations for the remote electronics for easier installation, serviceability, or increased protection.
- 
Swappable sensor electronics
The sensor electronics can be ordered separately and can be connected to the previously installed RD5 sensor rod without further adaptation. This simplifies service repairs and saves costs.
- 
Protection of the sensor electronics
By separating the robust sensor rod from the complex evaluation electronics improved protection against process influences can be realized.

Fig. 1: Time-of-flight based magnetostrictive position sensing principle

In addition the R-Series V EtherCAT® scores with the following features:

- 
2 positions simultaneously
The R-Series V RD5 EtherCAT® can detect and report the position, velocity and acceleration of up to 2 magnets simultaneously.
- 
R-Series V EtherCAT®
In addition to the measured position value via the EtherCAT® protocol further data about the current sensor status, such as the total distance travelled, the internal temperature and the total operating hours, can be displayed for diagnostic purposes.

All settings under control with the smart assistants for the R-Series V

The TempoLink® and the TempoGate® smart assistants support you in setup and diagnostics of the R-Series V. For more information of these assistants please see the data sheets:

RD5: COMPLETE SENSOR OR SEPARATE COMPONENTS – IT'S UP TO YOU

The RD5 sensor consists of 2 main components:

- ① Sensor electronics assembly with mounting block and mating connector
- ② Sensor rod assembly with cable and connector

The RD5 sensor is the latest version in the RD model line. These sensor models are unique in that their sensor rod is detached from the main electronics components and connected only by a joining cable.

The RD5 sensor is normally ordered as a **complete kit (RD5-K)**. Also, the **sensor rod assembly (RD5-R)** and the **sensor electronics assembly (RD5-E)** can each be ordered separately. This offers added flexibility for ordering just the replacement components needed or for keeping spare components on site for your more critical applications.

RD5 VERSATILITY FOR SOLVING CHALLENGING APPLICATIONS

The RD5 sensor from Temposonics® is characterized by its remote electronics. This allows you to move the sensor electronics away from the sensor rod for protection from harsh environments or when the installation space at the measuring point is too small to fit a RH5 rod version.

Configure the sensor you need to fit your confined space applications

RD5 offers new options for confined installation spaces like a small footprint connector and a compact mounting block.

Reduce or eliminate your machine down time

RD5 offers you easy ordering of spare or replacement components if sensor damage does occur.

Use at high temperature applications

The sensor rod assembly of RD5 is rated up to 120 °C (248 °F) for stroke lengths up to 2540 mm (100 in.) and up to 105 °C (221 °F) for longer stroke lengths.

THE RD5 OPTIONS – TO BEST FIT YOUR APPLICATION

Sensor rod flange options

Image	Type	Advantage
	»S«	• Pressure fit for embedding in cylinder
	»M/T«	• Small threaded flange for confined space
	»C/D«	• Large surface hex flange

Sensor rod cable options

Image	Type	Advantage
	»W«	• Single wires allows small bend radius • For short distances up to 50 cm
	»K«	• PUR cable with min. bend radius of 24 mm • For distances up to 1.15 m
	»J«	• FEP cable with min. bend radius of 57 mm • For great distances up to 20 m

Sensor rod connectors

(for connecting the sensor rod to the sensor electronics)

Image	Type	Advantage
	»G«	• Compact inline M12 connector • Suitable for cable type »J« and »K« • For side connection
	»W«	• Small footprint panel mount M12 connector • Suitable for cable type »W« • Requires joining cable RD5-C • For side connection
	»S«	• Standard inline M16 connector • Suitable for cable type »J« and »K« • For side connection
	»E«	• Compact inline flat connector • Suitable for cable type »J«, »K« and »W« • For bottom connection

Sensor electronics mounting blocks with mating connectors

Image	Type	Advantage
	»G«	• Compact mounting block with side M12 mating connector • For sensor rod connector type »G« or joining cable RD5-C • For reduced mounting space
	»S«	• Classic mounting block with side M16 mating connector • For sensor rod connector type »S«
	»E«	• Compact mounting block with bottom connection and flat mating connector • For sensor rod connector type »E« • For reduced mounting space
	»B«	• Classic mounting block with bottom connection and flat mating connector • For sensor rod connector type »E«

Cable connectors* – Signal

**M12 D-coded male connector
(4 pin), straight
Part no. 370 523**

Material: Zinc nickel-plated
Termination: Insulation-displacement
Cable Ø: 6...7.2 mm (0.2...0.28 in.)
Wire: 24 AWG – 22 AWG
Operating temperature:
–25...+85 °C (–13...+185 °F)
Ingress protection: IP65 / IP67
(correctly fitted)
Fastening torque: 0.6 Nm

**M12 connector end cap
Part no. 370 537**

Female connectors M12 should be covered by this protective cap
Material: Brass nickel-plated
Ingress protection: IP67 (correctly fitted)
Fastening torque: 0.39...0.49 Nm

Cable connectors* – Power

**M12 A-coded female connector
(4 pin/5 pin), straight
Part no. 370 677**

Material: GD-Zn, Ni
Termination: Screw
Contact insert: CuZn
Cable Ø: 4...8 mm (0.16...0.31 in.)
Wire: max. 1.5 mm² (16 AWG)
Operating temperature:
–30...+85 °C (–22...+185 °F)
Ingress protection: IP67 (correctly fitted)
Fastening torque: 0.6 Nm

**M8 female connector (4 pin), straight
Part no. 370 504**

Material: CuZn nickel plated
Termination: Solder
Cable Ø: 3.5...5 mm (0.14...0.28 in.)
Wire: 0.25 mm²
Operating temperature:
–40...+85 °C (–40...+185 °F)
Ingress protection: IP67 (correctly fitted)
Fastening torque: 0.5 Nm

Cables

**PUR signal cable
Part no. 530 125**

Material: PUR jacket; green
Features: Cat 5, highly flexible, halogen free, suitable for drag chains, mostly oil & flame resistant
Cable Ø: 6.5 mm (0.26 in.)
Cross section: 2 × 2 × 0.35 mm² (22 AWG)
Bending radius: 6 × D (fixed installation)
Operating temperature:

Material: PVC jacket; gray
Features: Shielded, flexible, mostly flame resistant
Cable Ø: 4.9 mm (0.19 in.)
Cross section: 3 × 0.34 mm²
Bending radius: 5 × D (fixed installation)
Operating temperature:
–30...+80 °C (–22...+176 °F)

**Signal cable with M12 D-coded male connector (4 pin), straight – M12 D-coded, male connector (4 pin), straight
Part no. 530 064**

Material: PUR jacket; green
Feature: Cat 5e
Cable length: 5 m (16.4 ft)
Cable Ø: 6.5 mm (0.26 in.)
Ingress protection: IP65, IP67, IP68 (correctly fitted)
Operating temperature:
–30...+70 °C (–22...+158 °F)

**Signal cable with M12 D-coded male connector (4 pin), straight – RJ45 male connector, straight
Part no. 530 065**

Material: PUR jacket; green
Feature: Cat 5e
Cable length: 5 m (16.4 ft)
Cable Ø: 6.5 mm (0.26 in.)

ORDER CODE FOR SENSOR ELECTRONICS AND MOUNTING BLOCK ONLY

NOTICE

The RD5 sensor electronics housing with mounting block can be ordered separately as a spare or replacement. For ordering just the sensor electronics components, use the **RD5-E** model number configurator below.

a	Sensor model													
R	D	5	Sensor rod with detached electronics											

b	Sensor components													
E	Sensor electronics assembly with mounting block and mating connector													

c	Sensor electronics mounting block with mating connector													
B	Classic mounting block with bottom connection and flat mating connector (only for sensor rod connector type »E«)													
E	Compact mounting block with bottom connection and flat mating connector (only for sensor rod connector type »E«)													
G	Compact mounting block with side M12 mating connector (only for sensor rod connector type »G« and »W«)													
S	Classic mounting block with side M16 mating connector (only for sensor rod connector type »S«)													

d	Number of magnets													
X	X	01...02 position(s) (1...2 magnet(s))												

e	Connection type													
D	5	8	2 × M12 female connectors (D-coded), 1 × M12 male connector (A-coded)											
D	5	6	2 × M12 female connectors (D-coded), 1 × M8 male connector											

f	System													
1	Standard													

g	Output													
U	1	0	1	EtherCAT®, position, velocity and acceleration (1...2 magnet(s))										

NOTICE

- Specify number of magnets for your application and order the magnets separately.
- The number of magnets is limited by the stroke length.
The minimum allowed distance between magnets (i.e. front face of one to the front face of the next one) is 75 mm (3 in.).
- Use magnets of the same type for multi-position measurement.

ORDER CODE FOR RD5 JOINING CABLE – RD5-C

NOTICE

1	2	3	4	5	6	7	8	9	10	11
R	D	5	C	J					C	M
a			b	c				e		

The **RD5-C** joining cable is required when the sensor rod connector is the M12 square panel mount connector, **W**. For ordering the joining cable, use the RD5-C model number configurator below.

a	Sensor model									
R	D	5	Sensor rod with detached electronics							
b	Sensor components									
C	Joining cable (M12 to M12)									
c	Cable type and length									
J	X	X	X	X	FEP cable					
					Length in centimeters					
					(range 0050...2000 cm)					
					Standard lengths are: 0050, 0100, 0300, 0500, 1000, 1500, 2000 cm					
Non-standard lengths for the joining cable are available; must be encoded in 1 cm increments and within the specified range										
d	Unit of measure									
C	M	Length in centimeters

GLOSSARY

D

Distributed Clock

EtherCAT® uses a logical network of **Distributed Clocks** (DC) to synchronize the time on all local bus devices on the network. The EtherCAT® master usually selects the first Distributed Clock capable slave device as a Reference Clock, and then maintains a precise mapping of frame delays for all other slave devices in order to adjust their time to match the system time.

E

ESI

The properties and functions of an EtherCAT® device are described in an ESI file (**EtherCAT® Slave Information**). The XML-based ESI file contains all relevant data that are important for the implementation of the device in the controller as well as for data exchange during operation. The ESI file of the R-Series V EtherCAT® is available on the homepage www.temposonics.com.

EtherCAT®

EtherCAT® (**Ethernet for Control Automation Technology**) is an Industrial Ethernet interface and is managed by the **EtherCAT® Technology Group** (ETG). The R-Series V EtherCAT® and its corresponding ESI file are certified by the ETG.

Extrapolation

The native measurement cycle time of a sensor increases with the stroke length. With extrapolation, the sensor is able to report data faster than the native cycle time, independent of the stroke length of the sensor. Without extrapolation, if data is requested faster than the native cycle time, the last measured value is repeated.

M

Multi-position measurement

During the measurement cycle, the positions of every magnet on the sensor are simultaneously reported. The velocity and acceleration are continuously calculated based on these changing position values as the magnets are moved.
