## 1. Introduction

### 1.1 Purpose and use of this manual

Before starting the operation of Temposonics® position sensors, read this documentation thoroughly and follow the safety information. Keep this manual for future reference!

The content of this technical documentation and of its appendix is intended to provide information on mounting, installation and commissioning by qualified automation personnel <sup>1</sup> or instructed service technicians who are familiar with the project planning and dealing with Temposonics® sensors.

### 1.2 Used symbols and warnings

Warnings are intended for your personal safety and for avoidance of damage to the described product or connected devices. In this documentation, safety information and warnings to avoid danger that might affect the life and health of operating or service personnel or cause material damage are highlighted by the pictogram defined below.

Symbol	Meaning
<b>NOTICE</b>	This symbol is used to point to situations that may lead to material damage, but not to personal injury.

## 2. Safety instructions

### 2.1 Intended use

This product may be used only for the applications defined under item 1 and only in conjunction with the third-party devices and components recommended or approved by Temposonics. As a prerequisite of proper and safe operation the product requires correct transport, storage, mounting and commissioning and must be operated with utmost care.

- The sensor systems of all Temposonics® series are intended exclusively for measurement tasks encountered in industrial, commercial and laboratory applications. The sensors are considered as system accessories and must be connected to suitable evaluation electronics, e.g. a PLC, IPC, indicator or other electronic control unit.

1/ The term "qualified technical personnel" characterizes persons who:

- are familiar with the safety concepts of automation technology applicable to the particular project and
- are competent in the field of electromagnetic compatibility (EMC) or
- have received adequate training for commissioning and service operations

### 2.2 Foreseeable misuse

Foreseeable misuse	Consequence
Wrong sensor connection	The sensor will not work properly or can be damaged
Operate the sensor out of the operating temperature range	No signal output – the sensor can be damaged
Power supply is out of the defined range	Signal output is wrong/ no signal output/ the sensor will be damaged
Position measurement is influenced by an external magnetic field	Signal output is wrong
Cables are damaged	Short circuit – the sensor can be damaged/sensor does not respond
Spacers are missing/ installed in a wrong order	Error in position measurement
Wrong connection of ground/shield	Signal output is disturbed – the electronics can be damaged
Use of a magnet that is not specified by Temposonics	Error in position measurement
Sensor is exposed to overvoltage/ electrostatic discharge (e.g., welding work, electrostatically supported coating, etc.)	The sensor can be damaged

**Do not alter the sensor afterwards.**

→ The sensor might be damaged.

**Do not step on the sensor.**

→ The sensor might be damaged.

- are familiar with the operation of the device and know the information required for correct operation provided in the product documentation

### 2.3 Installation, commissioning and operation

The position sensors must be used only in technically safe conditions. To maintain this condition and to ensure safe operation, installation, connection and service, work may be performed only by qualified technical personnel. If danger of injury to persons or of damage to operating equipment is caused by sensor failure or malfunction, additional safety measures such as plausibility checks, limit switches, EMERGENCY STOP systems, protective devices etc. are required. In the event of trouble, shut down the sensor and protect it against accidental operation.

#### Safety instructions for commissioning

To maintain the sensor's operability, it is mandatory to follow the instructions given below.

1. Protect the sensor against mechanical damage during installation and operation.
2. Do not open or dismantle the sensor.
3. Connect the sensor very carefully and pay attention to the polarity of connections and power supply.
4. Use only approved power supplies.
5. Ensure the sensor is operating within the defined limits for supply voltage, environmental conditions, etc.
6. Check the function of the sensor regularly and provide documentation of the checks.
7. Before applying power, ensure that nobody's safety is jeopardized by starting machines.

### 2.4 Safety instructions for use in explosion-hazardous areas

The sensor is not suitable for operation in explosion-hazardous areas.

### 2.5 Warranty

Temposonics grants a warranty period<sup>2</sup> for the position sensors and supplied accessories relating to material defects and faults that occur despite correct use in accordance with the intended application. The Temposonics obligation is limited to repair or replacement of any defective part of the unit. No warranty can be provided for defects that are due to improper use or above average stress of the product as well as for wear parts. Under no circumstances will Temposonics accept liability in the event of offense against the warranty rules, no matter if these have been assured or expected, even in case of fault or negligence of the company.

Temposonics explicitly excludes any further warranties. Neither the company's representatives, agents, dealers nor employees are authorized to increase or change the scope of warranty.

### 2.6 Return

For diagnostic purposes, the sensor can be returned to Temposonics or a repair facility explicitly authorized by Temposonics. Any shipment cost is the responsibility of the sender<sup>2</sup>. For a corresponding form, see chapter "11. Appendix I – Safety declaration" on page 99.

#### NOTICE

When returning sensors, place protective caps on male and female connectors of the sensor. For pigtail cables, place the cable ends in a static shielding bag for electrostatic discharge (ESD) protection. Fill the outer packaging around the sensor completely to prevent damage during transport.

<sup>2/</sup> See also applicable Temposonics terms of sales and delivery on:  
[www.temposonics.com](http://www.temposonics.com)

### 3. Identification

#### 3.1 Order code of Temposonics® RP5

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	
R	P	5										D	5		1	U	2		1	
a			b	c	d						e		f			g	h			

<b>a</b>	<b>Sensor model</b>		
R	P	5	Profile

<b>b</b>	<b>Design</b>
G	Magnet slider backlash free (part no. 253 421), suitable for internal linearization
L	Block magnet L (part no. 403 448)
M	U-magnet OD33 (part no. 251 416-2), suitable for internal linearization
N	Magnet slider longer ball-jointed arm (part no. 252 183), suitable for internal linearization
O	No position magnet
S	Magnet slider joint at top (part no. 252 182), suitable for internal linearization
V	Magnet slider joint at front (part no. 252 184), suitable for internal linearization

<b>c</b>	<b>Mechanical options</b>
A	Standard
V	Fluorelastomer seals for the sensor electronics housing

<b>d</b>	<b>Stroke length</b>				
X	X	X	X	M	0025...6350 mm
<b>Standard stroke length (mm)</b>		<b>Ordering steps</b>			
25... 500 mm		25 mm			
500...2500 mm		50 mm			
2500...5000 mm		100 mm			
5000...6350 mm		250 mm			
X	X	X	X	U	001.0...250.0 in.
<b>Standard stroke length (in.)</b>		<b>Ordering steps</b>			
1... 20 in.		1.0 in.			
20...100 in.		2.0 in.			
100...200 in.		4.0 in.			
200...250 in.		10.0 in.			
Non-standard stroke lengths are available; must be encoded in 5 mm/0.1 in. increments.					

<b>e</b>	<b>Number of magnets</b>	
X	X	01...20 position(s) (1...20 magnet(s))

<b>f</b>	<b>Connection type</b>		
D	5	6	2×M12 female connectors (D-coded), 1×M8 male connector
D	5	8	2×M12 female connectors (D-coded), 1×M12 male connector (A-coded)

<b>g</b>	<b>System</b>
1	Standard

<b>h</b>	<b>Output</b>			
U	2	0	1	EtherNet/IP™, position and velocity (1...20 magnet(s))
U	2	1	1	EtherNet/IP™, position and velocity, internal linearization (1...20 magnet(s))

**NOTICE**

- For the RP5, the magnet selected in **b** "Design" is included in the scope of delivery. Specify the number of magnets for your application. For multi-position measurements with more than one magnet, order the other magnets separately.
- The number of magnets is limited by the stroke length. The minimum allowed distance between magnets (i.e. front face of one to the front face of the next one) is 75 mm (3 in.).
- Use magnets of the same type for multi-position measurement.
- If the option for internal linearization (U211) in **h** "Output" is chosen, select a suitable magnet.

### 3.2 Order code of Temposonics® RH5

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20
R	H	5										D	5		1	U	2		1

1000...2500 mm		50 mm			
2500...5000 mm		100 mm			
5000...7620 mm		250 mm			
X	X	X	X	U	001.0...300.0 in.
<b>Standard stroke length (in.)</b>		<b>Ordering steps</b>			
1... 20 in.		0.2 in.			
20... 30 in.		0.4 in.			
30... 40 in.		1.0 in.			
40...100 in.		2.0 in.			
100...200 in.		4.0 in.			
200...300 in.		10.0 in.			

Non-standard stroke lengths are available; must be encoded in 5 mm/0.1 in. increments.

<b>e</b>	<b>Number of magnets</b>	
X	X	01...20 position(s) (1...20 magnet(s))

<b>f</b>	<b>Connection type</b>		
D	5	6	2×M12 female connectors (D-coded), 1×M8 male connector
D	5	8	2×M12 female connectors (D-coded), 1×M12 male connector (A-coded)

<b>g</b>	<b>System</b>
1	Standard

<b>h</b>	<b>Output</b>			
U	2	0	1	EtherNet/IP™, position and velocity (1...20 magnet(s))
U	2	1	1	EtherNet/IP™, position and velocity, internal linearization (1...20 magnet(s))

#### NOTICE

- Specify the number of magnets for your application. For multi-position measurements with more than 1 magnet, order the other magnets separately.
- The number of magnets is limited by the stroke length. The minimum allowed distance between magnets (i.e. front face of one to the front face of the next one) is 75 mm (3 in.).
- Use magnets of the same type for multi-position measurement, .
- If the option for internal linearization (U211) in **h** "Output" is chosen, select a suitable magnet.
- The internal linearization (U211) in **h** "Output" is not available with the flexible sensing element **F** in **c** "Mechanical options".

### 3.3 Order code of Temposonics® RM5

#### NOTICE

- Specify number of magnets for your application and order the magnets separately.
- The number of magnets is limited by the stroke length. The minimum allowed distance between magnets (i.e. front face of one to the front face of the next one) is 75 mm (3 in.).
- Use magnets of the same type for multi-position measurement.
- If the option for internal linearization (U211) in **h** "Output" is chosen, select a suitable magnet.

### 3.8 Nameplate

Fig. 1: Example of nameplate of an R-Series V RH5 sensor with EtherNet/IP™ output

### 3.9 Approvals

- ODVA certified
- CE declaration
- UKCA declaration
- UL certified

### 3.10 Scope of delivery

#### RP5 (profile sensor):

- Sensor
- Position magnet (not for RP5 with design »O«)
- 2 mounting clamps up to 1250 mm (50 in.) stroke length +  
1 mounting clamp for each 500 mm (20 in.) additional stroke length

#### RH5 (rod sensor):

- RH5-B: Base unit (without flange & rod assembly),  
3 × socket screws M4×59
- RH5-J/M/S/T: Sensor, O-ring

#### RM5 (sensor in super shield housing):

- RM5-B: Base unit (without flange & rod assembly),  
3 × socket screws M4×59
- RM5-M/S: Sensor, O-ring

#### RF5 (improved flexible rod sensor):

- RF5-B: Sensor (without flange & rod assembly),  
3 × socket screws M4×59

#### RFV (flexible rod sensor):

- RFV-B: Sensor (without flange & rod assembly),  
3 × socket screws M4×59
- RFV-M/S: Sensor (with flange & without rod assembly), O-ring

#### RD5 (improved sensor with detached electronics):

- RD5-K-C/D/M/T: Sensor, O-ring
- RD5-K-S: Sensor, O-ring, back-up ring
- RD5-R-C/D/M/T: Sensor, O-ring (see [page 39](#))
- RD5-R-S: Sensor, O-ring, back-up ring (see [page 39](#))
- RD5-E: As ordered (see [page 41](#))

#### RDV (sensor with detached electronics):

- RDV-C/D/M/T: Sensor, O-ring
- RDV-S: Sensor, O-ring, back-up ring

## 4. Product description and commissioning

### 4.1 Functionality and system design

#### Product designation

- Position sensor Temposonics® R-Series V

#### Sensor model

- Temposonics® R-Series V RP5 (profile sensor)
- Temposonics® R-Series V RH5 (rod sensor)
- Temposonics® R-Series V RM5 (sensor in super shield housing)
- Temposonics® R-Series V RF5 (improved flexible rod sensor)
- Temposonics® R-Series V RFV (flexible rod sensor)
- Temposonics® R-Series V RD5 (improved sensor with detached electronics)
- Temposonics® R-Series V RDV (sensor with detached electronics)

#### Stroke length

- Temposonics® R-Series V RP5: 25... 6350 mm (1...250 in.)
- Temposonics® R-Series V RH5: 25... 7620 mm (1...300 in.)
- Temposonics® R-Series V RM5: 25... 7615 mm (1...299.8 in.)
- Temposonics® R-Series V RF5: 150...20,000 mm (6...787 in.)
- Temposonics® R-Series V RFV: 150...20,000 mm (6...787 in.)
- Temposonics® R-Series V RD5: 25... 5080 mm (1...200 in.)
- Temposonics® R-Series V RDV: 25... 5080 mm (1...200 in.)

#### Output signal

- EtherNet/IP™

#### Application

The Temposonics® position sensors are used for measurement and conversion of the length (position) variable in the fields of automated systems and mechanical engineering.

#### Principle of operation and system construction

The absolute, linear position sensors provided by Temposonics rely on the company's proprietary Temposonics® magnetostrictive technology, which can determine position with a high level of precision and robustness. Each Temposonics® position sensor consists of a ferromagnetic waveguide, a position magnet, a strain pulse converter and supporting electronics. The magnet, connected to the object in motion in the application, generates a magnetic field at its location on the waveguide. A short current pulse is applied to the waveguide. This creates a momentary radial magnetic field and torsional strain on the waveguide. The momentary interaction of the magnetic fields releases a torsional strain pulse that propagates the length of the waveguide. When the ultrasonic wave reaches the end of the waveguide it is converted into an electrical signal. Since the speed of the ultrasonic wave in the waveguide is precisely known, the time required to receive the return signal can be converted into a linear position measurement with both high accuracy and repeatability.

Fig. 2: Time-of-flight based magnetostrictive position sensing principle

#### Modular mechanical and electronic construction

- The sensor rod or profile protects the inner sensor element.
- The sensor electronics housing, a rugged aluminum construction, contains the complete electronic interface with active signal conditioning.
- The external position magnet is a permanent magnet. Mounted on the mobile machine part, it travels along the sensor rod or profile and triggers the measurement through the sensor rod wall.
- The sensor can be connected directly to a control system. Its electronics generates a strictly position-proportional signal output between start and end position.

## 4.2 Installation and design of Temposonics® RP5

### RP5-M, example: Connection type D58 (connector outlet)

### RP5-G/S, example: Connection type D56 (connector outlet)

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

Fig. 3: Temposonics® RP5 with U-magnet/magnet slider

### Installation of RP5

The position sensor can be installed in any position. Normally, the sensor is firmly installed and the position magnet is fastened to the mobile machine part. Thus it can travel along the sensor profile. The sensor is fitted on a flat machine surface using the mounting clamps (Fig. 4). A length-dependent number of these clamps are delivered with the sensor and must be distributed over the profile at regular distances. For fastening use M5×20 screws to DIN 6912 that should be tightened with a fastening torque of 5 Nm.

Fig. 4: Mounting clamps (part no. 400 802) with cylinder screw M5×20

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

### Alternative:

If only limited space is available, the profile sensor can be mounted also via the T-rail in the profile bottom using a T-slot nut M5 (part no. 401 602) or a sliding block (Fig. 5).

Fig. 5: T-slot nut M5 (part no. 401 602)

### NOTICE

Take care to mount the sensor parallel to the axis of motion being measured to avoid damage to the magnet and sensor.

4.3 Installation and design of Temposonics® RH5

RH5-M/S-A/F/V – RH5 with threaded flange M18×1.5-6g or ¾"-16 UNF-3A, example: Connection type D58 (connector outlet)

RH5-T-A/F/V – RH5 with threaded flange ¾"-16 UNF-3A with raised-face, example: Connection type D56 (connector outlet)

Mechanical option »B«: Bushing on rod end for threaded flange M18×1.5-6g or ¾"-16 UNF-3A

Mechanical option »M«: Thread M4 at rod end for threaded flange M18×1.5-6g or ¾"-16 UNF-3A

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

Fig. 6: Temposonics® RH5 with ring magnet, part 1

Fig. 7: Temposonics® RH5 with ring magnet, part 2

**Installation of RH5 with threaded flange**

Fix the sensor rod via threaded flange M18×1.5-6g, M22×1.5-6g or ¾"-16 UNF-3A. Note the fastening torque shown in Fig. 8. Lightly oil the thread before tightening.

Fig. 8: Mounting example of threaded flange

**Installation of a rod-style sensor in a fluid cylinder**

The rod-style version has been developed for direct stroke measurement in a fluid cylinder. Mount the sensor via threaded flange or a hex nut.

- Mounted on the face of the piston, the position magnet travels over the rod without touching it and indicates the exact position through the rod wall – independent of the hydraulic fluid.

- The pressure resistant sensor rod is installed into a bore in the piston rod.
- The base unit is mounted by means of three screws. It is the only part that needs to be replaced if servicing is required, i.e. the hydraulic circuit remains closed. For more information see chapter "4.11.1 Replacement of base unit on the RH5/RFV/RF5 model" on page 57.

Fig. 9: Sensor in cylinder

**Hydraulics sealing**

There are two ways to seal the flange contact surface (Fig. 10):

1. A sealing by using an O-ring (e.g. 22.4 × 2.65 mm (0.88 × 0.1 in.), 25.07 × 2.62 mm (0.99 × 0.1 in.)) in a cylinder end cap groove.
2. A sealing by using an O-ring in the undercut.
  - For threaded flange (3/4"-16 UNF-3A):  
O-ring 16.4 × 2.2 mm (0.65 × 0.09 in.) (part no. 560 315)
  - For threaded flange (M18×1.5-6g):  
O-ring 15.3 × 2.2 mm (0.60 × 0.09 in.) (part no. 401 133)
  - For threaded flange (M22×1.5-6g):  
O-ring 19.2 × 2.2 mm (0.76 × 0.09 in.) (part no. 561 337)

In the case of threaded flanges M18×1.5-6g or M22×1.5-6g, provide a screw hole based on ISO 6149-1 (Fig. 11). See ISO 6149-1 for further information.

Fig. 10: Possibilities of sealing for threaded flange with flat face 1. + 2.a. (RH5-J/M/S) and with raised-face 2.b. (RH5-T)

- Seat the flange contact surface completely on the cylinder mounting surface.
- The cylinder manufacturer determines the pressure-resistant gasket (copper gasket, O-ring, etc.).
- The position magnet should not grind on the sensor rod.
- The piston rod drilling  
 (RH5-M/S/T-A/F/M/V with rod Ø 10 mm: ≥ Ø 13 mm (≥ Ø 0.51 in.);  
 RH5-M/S/T-B with rod Ø 10 mm: ≥ Ø 16 mm (≥ Ø 0.63 in.);  
 RH5-J-A/V with rod Ø 12.7 mm: ≥ Ø 16 mm (≥ Ø 0.63 in.))  
 depends on the pressure and piston speed.
- Adhere to the information relating to operating pressure.
- Protect the sensor rod against wear.

Notice for metric threaded flanges

#### 4.4 Installation and design of Temposonics® RM5

Fig. 12: Temposonics® RM5 with ring magnet

#### Installation of RM5 with threaded flange

Fix the sensor rod via threaded flange M18×1.5-6g or ¾"-16 UNF-3A. Note the fastening torque shown in Fig. 13. Lightly oil the thread before tightening.

Fig. 13: Mounting example of threaded flange

Fig. 14: RM5 sensor in cylinder

#### Installation of a rod-style sensor in a fluid cylinder

The rod-style version has been developed for direct stroke measurement in a fluid cylinder. Mount the sensor via threaded flange or a hex nut.

- Mounted on the face of the piston, the position magnet travels over the rod without touching it and indicates the exact position through the rod wall – independent of the hydraulic fluid.
- The pressure resistant sensor rod is installed into a bore in the piston rod.
- The base unit inside the RM5 is mounted by means of three screws. It is the only part that needs to be replaced if servicing is required, i.e. the hydraulic circuit remains closed. For more information see chapter “4.11.2 Replacement of base unit on the RM5 model” on page 58.

#### Hydraulics sealing

There are two ways to seal the flange contact surface (Fig. 15):

1. A sealing by using an O-ring (e.g. 22.4 × 2.65 mm (0.88 × 0.1 in.), 25.07 × 2.62 mm (0.99 × 0.1 in.)) in a cylinder end cap groove.
2. A sealing by using an O-ring in the flange undercut.

For threaded flange (¾"-16 UNF-3A):

O-ring 16.4 × 2.2 mm (0.65 × 0.09 in.) (part no. 560 315)

For threaded flange (M18×1.5-6g):

O-ring 15.3 × 2.2 mm (0.60 × 0.09 in.) (part no. 401 133)

In the case of threaded flange M18×1.5-6g provide a screw hole based on ISO 6149-1 (Fig. 16). See ISO 6149-1 for further information.

Fig. 15: Possibilities of sealing

- Seat the flange contact surface completely on the cylinder mounting surface.
- The cylinder manufacturer determines the pressure-resistant gasket (copper gasket, O-ring, etc.).
- The position magnet should not grind on the sensor rod.
- The piston rod drilling (RM5-M/S with rod Ø 10 mm: ≥ Ø 13 mm (≥ Ø 0.51 in.)) depends on the pressure and piston speed.
- Adhere to the information relating to operating pressure.
- Protect the sensor rod against wear.

4.5 Installation and design of Temposonics® RF5

RF5-B – RF5 base unit (without flange & rod assembly), example: Connection type D56 (connector outlet)

Stroke length	Tolerance of total length	Dead zone
Up to 7620 mm (300.00 in.)	±5 mm (0.20 in.)	94 mm (3.70 in.)
Up to 10,000 mm (393.70 in.)	±10 mm (0.39 in.)	100 mm (3.94 in.)
Up to 15,000 mm (590.55 in.)	±15 mm (0.59 in.)	120 mm (4.72 in.)
Up to 20,000 mm (787.00 in.)	±20 mm (0.79 in.)	140 mm (5.51 in.)

Note: Tolerance of total length has no influence on the stroke length.

RF5-B – RF5 base unit (without flange & rod assembly), example: Connection type D58 (connector outlet)

Stroke length	Tolerance of total length	Dead zone
Up to 7620 mm (300.00 in.)	±5 mm (0.20 in.)	94 mm (3.70 in.)
Up to 10,000 mm (393.70 in.)	±10 mm (0.39 in.)	100 mm (3.94 in.)
Up to 15,000 mm (590.55 in.)	±15 mm (0.59 in.)	120 mm (4.72 in.)
Up to 20,000 mm (787.00 in.)	±20 mm (0.79 in.)	140 mm (5.51 in.)

Note: Tolerance of total length has no influence on the stroke length.

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

Fig. 17: Temposonics® RF5 base unit

### Installation of RF5

Note the following information when mounting and handling an RF5 sensor:

1. Always insert the flexible sensor rod in a support tube (e.g. sensor rod HD/HL/HP or HFP profile). The support tube has to be made of non-magnetic material and has to have an inside diameter of minimum 9.4 mm (0.37 in.) (Fig. 18). The support tube can be straight or bent.
2. Do never bend beyond the minimum bending radius of 100 mm (3.94 in.).
3. Note the minimum distance to a spatial limitation of 150 mm (5.91 in.), when mounting/dismounting the sensor. The recommended distance is 200 mm (7.87 in.) (Fig. 19).
4. Note the non-flexible area of the sensor rod from the flange of 30 mm (1.18 in.) (for RF5-B).

#### NOTICE

Bending radii < 100 mm (3.94 in.) during handling, installation or operation will damage the flexible sensor rod and thus impair the function of the sensor.

Fig. 18: Sensor with support tube

Fig. 19: Clearances for installation and handling

### Mounting an RF5 sensor

There are three ways to mount the RF5 sensor:

1. Installation of the RF5-B base unit in a support tube provided by the customer
2. Installation of the RF5-B base unit in a sensor rod HD/HL/HP or HFP profile
3. Installation of the RF5-B base unit with threaded flange M18×1.5-6g or threaded flange ¾"-16 UNF-3A

These installation options are described below.

#### 1. Installation of the RF5-B base unit in a support tube provided by the customer

1. Insert the flexible sensor rod in a support tube.
2. When inserting the flexible sensor rod, hold it close to the flange and insert it slowly into the support tube (Fig. 20). This allows air in the support tube to escape.

Fig. 20: Hold the flexible sensor rod close to the flange when inserting it

3. Mount the sensor electronics housing using the three M4×59 hexagon socket screws made of non-magnetic material. Tightening torque: 1.4 Nm (Fig. 21). Secure the screws before installation, e.g. with Loctite 243. Remove the three knurled nuts beforehand.

Fig. 21: Mounting with socket head screws M4×59

4. Ensure that the O-ring seal (part no. 562 003) is correctly inserted in the groove on the sensor electronics housing before inserting the base unit into the support tube and attaching the sensor electronics (Fig. 22).

Fig. 22: Correct position of the O-ring in the groove of the sensor electronics housing

## 2. RF5-B with sensor rod HD/HL/HP or HFP profile (see “4.16 Frequently ordered accessories for Temposonics® RF5”)

Using the HD/HL/HP sensor rod or the HFP profile offers you the advantage that the flexible sensor rod is guided in a suitable protective tube.

1. When inserting the flexible sensor rod, hold it close to the flange and insert it slowly into the support tube (Fig. 20). This allows air in the support tube to escape.
2. Mount the sensor electronics housing to the sensor rod or HFP profile using three M4×59 hexagon socket screws made of non-magnetic material: Tightening torque: 1.4 Nm (Fig. 21). Secure the screws before installation, e.g. with Loctite 243. Remove the three knurled nuts beforehand.
3. Ensure that the O-ring seal (part no. 562 003) is correctly inserted in the groove on the sensor electronics before inserting the base unit into the support tube or the HFP profile and attaching the sensor electronics (Fig. 22).

Details on installing the sensor rod HD/HL/HP or the HFP profile follow.

### Installation of an RF5 sensor with sensor rod HD/HL/HP in a fluid cylinder

The rod-style version has been developed for direct stroke measurement in a fluid cylinder. Fix the sensor rod via threaded flange M18×1.5-6g or 3/4"-16 UNF-3A. Note the fastening torque shown in Fig. 23. Lightly oil the thread before tightening.

Fig. 23: Mounting example of threaded flange

- Mounted on the face of the piston, the position magnet travels over the rod without touching it and indicates the exact position through the rod wall – independent of the hydraulic fluid.
- The pressure resistant sensor rod is installed into a bore in the piston rod.
- The base unit is mounted by means of three screws. It is the only part that needs to be replaced if servicing is required, i.e. the hydraulic circuit remains closed. For more information see chapter “4.11.1 Replacement of base unit on the RH5/RFV/RF5 model” on page 57.
- Seat the flange contact surface completely on the cylinder mounting surface.
- The cylinder manufacturer determines the pressure-resistant gasket (copper gasket, O-ring, etc.).
- The position magnet should not grind on the sensor rod.
- The piston rod drilling for RF5 sensors with sensor rod (outer diameter 12.7 mm (0.5 in.)) is  $\geq 16$  mm ( $\geq 0.63$  in.). The borehole depends on the pressure and piston speed.
- Adhere to the information relating to operating pressure.
- Protect the sensor rod against wear.

### Hydraulics sealing when using an RF5 sensor in a sensor rod HD/HL/HP

There are two ways to seal the flange contact surface (Fig. 24):

1. A sealing by using an O-ring  
(e.g. 22.4 × 2.65 mm (0.88 × 0.1 in.), 25.07 × 2.62 mm (0.99 × 0.1 in.)) in a cylinder end cap groove.
2. A sealing by using an O-ring in the flange undercut.  
For threaded flange (3/4"-16 UNF-3A) »S«: O-ring 16.4 × 2.2 mm (0.65 × 0.09 in.) (part no. 560 315)  
For threaded flange (M18×1.5-6g) »M«: O-ring 15.3 × 2.2 mm (0.60 × 0.09 in.) (part no. 401 133)

In the case of threaded flange M18×1.5-6g provide a screw hole based on ISO 6149-1 (Fig. 25). See ISO 6149-1 for further information.

Fig. 24: Possibilities of sealing

Notice for metric threaded flanges

Fig. 25: Notice for metric threaded flange M18×1.5-6g based on DIN ISO 6149-1

### Installation of RF5 sensor with HFP profile

The RF5 sensor with HFP profile can be installed in any position. The HFP profile is firmly installed and the position magnet is fastened to the mobile machine part. Thus it can travel along the sensor profile. The sensor is fitted on a flat machine surface using the mounting clamps (Fig. 26). A length-dependent number of these clamps are delivered with the sensor and must be distributed over the profile at regular distances. For fastening use M5×20 screws to DIN 6912 that should be tightened with a fastening torque of 5 Nm.

Fig. 26: Mounting clamps (part no. 400 802) with cylinder screw M5×20

### 3. RF5-B with threaded flange M18×1.5-6g (part no. 404 874) or threaded flange 3/4"-16 UNF-3A (part no. 404 875)

Fix the sensor rod via threaded flange M18×1.5-6g or 3/4"-16 UNF-3A. Note the fastening torque:

- Threaded flange M18×1.5-6g (part no. 404 874): 65 Nm
- Threaded flange 3/4"-16 UNF-3A (part no. 404 875): 50 Nm

Lightly oil the thread before tightening.

- Insert the flexible sensor rod in a support tube.
- When inserting the flexible sensor rod, hold it close to the flange and insert it slowly into the support tube (Fig. 20). This allows air in the support tube to escape.
- Mount the sensor via flange using the three M4×59 hexagon socket screws made of non-magnetic material. Tightening torque: 1.4 Nm (Fig. 21). Remove the three knurled nuts beforehand.
- Ensure that the O-ring seal (part no. 562 003) is correctly inserted in the groove on the sensor electronics housing before inserting the base unit into the support tube and attaching the sensor electronics (Fig. 22).

### NOTICE

To fulfill the requirements of EMC standards for emission and immunity the following points are necessary:

- The sensor electronics housing has to be connected to machine ground (Fig. 95).
- Embed the flexible sensor element in an appropriately shielded environment, e.g. in a sensor rod HD/HL/HP or HFP profile.

4.6 Installation and design of Temposonics® RFV

RFV-B – RFV base unit (without flange & rod assembly), example: Connection type D56 (connector outlet)

Stroke length	Tolerance of total length	Dead zone
Up to 7620 mm (300.00 in.)	+8 mm (0.31 in.)/ -5 mm (0.20 in.)	94 mm (3.70 in.)
Up to 10,000 mm (393.70 in.)	+15 mm (0.59 in.)/-15 mm (0.59 in.)	100 mm (3.94 in.)
Up to 15,000 mm (590.55 in.)	+15 mm (0.59 in.)/-30 mm (1.18 in.)	120 mm (4.72 in.)
Up to 20,000 mm (787.00 in.)	+15 mm (0.59 in.)/-45 mm (1.77 in.)	140 mm (5.51 in.)

Note: Tolerance of total length has no influence on the stroke length.

RFV-M/S – RFV with threaded flange M18×1.5-6g or ¾"-16 UNF-3A (without rod assembly), example: Connection type D58 (connector outlet)

Threaded flange	a	b
»M«	A/F 46 (1.81)	53 (2.09)
»S«	A/F 44.5 (1.75)	51.3 (2.02)

Stroke length	Tolerance of total length	Dead zone
Up to 7620 mm (300.00 in.)	+8 mm (0.31 in.)/ -5 mm (0.20 in.)	94 mm (3.70 in.)
Up to 10,000 mm (393.70 in.)	+15 mm (0.59 in.)/-15 mm (0.59 in.)	100 mm (3.94 in.)
Up to 15,000 mm (590.55 in.)	+15 mm (0.59 in.)/-30 mm (1.18 in.)	120 mm (4.72 in.)
Up to 20,000 mm (787.00 in.)	+15 mm (0.59 in.)/-45 mm (1.77 in.)	140 mm (5.51 in.)

Note: Tolerance of total length has no influence on the stroke length.

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

Fig. 27: Temposonics® RFV with ring magnet

### Installation of RFV

Note the following information when mounting and handling an RFV sensor:

1. Always insert the flexible sensor rod in a support tube (e.g. sensor rod HD/HL/HP or HFP profile). The support tube has to be made of non-magnetic material and has to have an inside diameter of minimum 9.4 mm (0.37 in.) (Fig. 28). The support tube can be straight or bent.
2. Do never bend beyond the minimum bending radius of 250 mm (9.84 in.).
3. Note the minimum distance to a spatial limitation of 300 mm (11.81 in.), when mounting/dismounting the sensor. The recommended distance is 500 mm (20 in.) (Fig. 29).
4. Note the non-flexible area of the sensor rod from the flange of 107 mm (4.21 in.) (for RFV-B) respectively 97 mm (3.82 in.) (for RFV-M/S).

#### NOTICE

Smaller radiuses < 250 mm (9.84 in.) cause damage to the flexible sensor rod.

Fig. 28: Sensor with support tube

Fig. 29: Clearances for installation and handling

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

### Mounting the RFV

#### 1. RFV-B

- Insert the flexible sensor rod in a support tube.
- Mount the sensor electronics housing by means of three non-magnetic socket head screws M4x59. Fastening torque: 1.4 Nm (Fig. 30). Secure the screws, e.g. using Loctite 243, before re-installing.

Recommendation: Seal the sensor via flange.

#### 2. RFV-B with sensor rod HD/HL/HP or HFP profile (see "Frequently ordered accessories")

- Advantage: The flexible sensor rod is inserted in a support tube.
- Mount the sensor electronics housing by means of three non-magnetic socket head screws M4x59. Fastening torque: 1.4 Nm (Fig. 30). Secure the screws, e.g. using Loctite 243, before re-installing.
- Installation details: see below

#### 3. RFV-M/S

- Insert the flexible sensor rod in a support tube.
- Mount the sensor via flange.
- Installation details: see below
- Please note that liquid can enter the sensor between the thread and the flexible rod.

Fig. 30: Mounting with socket head screws M4x59

#### NOTICE

To fulfill the requirements of EMC standards for emission and immunity the following points are necessary:

- The sensor electronics housing has to be connected to machine ground (Fig. 95).
- Embed the flexible sensor element in an appropriately shielded environment, e.g. in a sensor rod HD/HL/HP or HFP profile.

### Installation of RFV with threaded flange »M«, »S«

Fix the sensor rod via threaded flange M18×1.5-6g or ¾"-16 UNF-3A. Note the fastening torque shown in Fig. 31. Lightly oil the thread before tightening.

Fig. 31: Mounting example of threaded flange

### Installation of RFV sensor with sensor rod HD/HL/HP in a fluid cylinder

The rod-style version has been developed for direct stroke measurement in a fluid cylinder. Mount the sensor via threaded flange or a hex nut.

- Mounted on the face of the piston, the position magnet travels over the rod without touching it and indicates the exact position through the rod wall – independent of the hydraulic fluid.
- The pressure resistant sensor rod is installed into a bore in the piston rod.
- The base unit is mounted by means of three screws. It is the only part that needs to be replaced if servicing is required, i.e. the hydraulic circuit remains closed. Before inserting the base unit into the sensor rod HD/HL/HP, remove the red sealing at the transition between the sensor electronics housing and the flexible sensor rod (Fig. 32). For more information see chapter “4.11.1 Replacement of base unit on the RH5/RFV/RF5 model” on page 57.
- Seat the flange contact surface completely on the cylinder mounting surface.
- The cylinder manufacturer determines the pressure-resistant gasket (copper gasket, O-ring, etc.).
- The position magnet should not grind on the sensor rod.
- The piston rod drilling for RFV sensors with sensor rod (outer diameter 12.7 mm (0.5 in.)) is  $\geq 16$  mm ( $\geq 0.63$  in.). The borehole depends on the pressure and piston speed.
- Adhere to the information relating to operating pressure.
- Protect the sensor rod against wear.

Fig. 32: Remove sealing before inserting into sensor rod HD/HL/HP

### Hydraulics sealing when using an RFV sensor in a sensor rod HD/HL/HP

There are two ways to seal the flange contact surface (Fig. 33):

1. A sealing by using an O-ring (e.g. 22.4 × 2.65 mm (0.88 × 0.1 in.), 25.07 × 2.62 mm (0.99 × 0.1 in.)) in a cylinder end cap groove.
2. A sealing by using an O-ring in the flange undercut.  
For threaded flange (¾"-16 UNF-3A) »S«: O-ring 16.4 × 2.2 mm (0.65 × 0.09 in.) (part no. 560 315)  
For threaded flange (M18×1.5-6g) »M«: O-ring 15.3 × 2.2 mm (0.60 × 0.09 in.) (part no. 401 133)

In the case of threaded flange M18×1.5-6g, provide a screw hole based on ISO 6149-1 (Fig. 34). See ISO 6149-1 for further information.

Fig. 33: Possibilities of sealing

For additional information about the accessories HFP profile and sensor rod HD/HL/HP see the accessories catalog document (part number: [551444](#)).

**Notice for metric threaded flanges**

### Replacing an R-Series 2004 RF-C with an R-Series V RFV-B

If you are replacing the R-Series 2004 RF-C base unit with the R-Series V RFV-B base unit, note the following points:

- The R-Series 2004 RF-C base unit is attached to the system with two screws. The R-Series V RFV-B base unit is mounted to the machine with three screws.
- Therefore, we recommend using the adapter plate kit 255198. The adapter plate is used to mount the base unit RFV-B with three screws to the existing hole pattern with two screws.
  - Fasten the adapter plate to the existing hole pattern using the two M4×6 (A/F 2.5) socket head screws with a fastening torque of 1.4 Nm. Ensure that the O-ring is correctly seated between the system and the adapter plate. Secure the screws with Loctite 243.
  - Place the RFV-B base unit on the adapter plate.
  - Attach the ground lug to one screw of the base unit.
  - Screw the RFV-B base unit to the adapter plate using the three M4×59 hexagon socket head (A/F 2.5) with a fastening torque of 1.4 Nm. Ensure that the O-ring is correctly seated between the base unit and the adapter plate. Secure the screws with Loctite 243.
- The adapter plate has a thickness of 5 mm. Order the RFV-B base unit with the addition H003 to compensate for the thickness of the adapter plate: RFV-B-XXXXXX-...-H003

#### 4.7 Installation and design of Temposonics® RD5

The R-Series V RD5 consists of the following main components:

- Sensor rod and flange with cable and connector
- Sensor electronics housing with mounting block and mating connector

Fig. 35 shows the sensor rod and flange and Fig. 36 shows the cable and the connectors which are connected to the sensor rod according to the order code.

Fig. 35: Temposonics® RD5 sensor rod and flanges

Cable »J«	Cable »K«	Cable »W«
		
<p>Material: FEP jacket, tan            Min. bending radius: 57 mm (2.2 in)            Operating temperature:            -40...+120 °C (-40...+248 °F)            Max. cable length: 20 m (65.6 ft.)</p>	<p>Material: PUR jacket, black            Min. bending radius: 24 mm (0.94 in)            Operating temperature:            -40...+80 °C (-40...+176 °F)            Max. cable length: 1.15 m (3.9 ft.)</p>	<p>Single wires, unshielded            Min. bending radius: 4 mm (0.16 in.) Fig. 36: RD5 sensor rod cables and sensor rod connectors

Fig. 37 and Fig. 38 show the sensor electronics housing with mounting block for side connection.

Fig. 37: Temposonics® RD5 with side connection, part 1

Fig. 38: Temposonics® RD5 with side connection, part 2

Fig. 39 and Fig. 40 show the sensor electronics housing with mounting block for bottom connection.

Fig. 39: Temposonics® RD5 with bottom connection, part 1

Fig. 40: Temposonics® RD5 with bottom connection, part 2

When installing the RD5 sensor, note that the components have different properties in terms of temperature rating and IP rating (Fig. 41):

Fig. 41: Temposonics® RD5 IP and temperature ratings

**NOTICE**

Mount the sensor as follows:

1. Mount the flange with sensor rod.
2. Mount the sensor electronics housing.
3. Install and the cable between sensor rod and the sensor electronics housing and connect it.

#### 4.7.1 Installation of RD5 with threaded flange

Fix the sensor rod via threaded flange M18×1.5-6g or ¾"-16 UNF-3A. Note the fastening torque shown in Fig. 42. Lightly oil the thread before tightening.

Fig. 42: Mounting example of threaded flange »C«/»D«, »M«/»T«

#### NOTICE

During installation, as the sensor rod is threaded into a cylinder port, the attached cable must be turned along with the sensor rod. This will avoid cable twisting that can defeat the cable gland's sealing and retention at the end of the rod and lead to possible failure.

#### Installation of a rod-style sensor in a fluid cylinder

The rod-style version has been developed for direct stroke measurement in a fluid cylinder. Mount the sensor via threaded flange or a hex nut.

- Mounted on the face of the piston, the position magnet travels over the rod without touching it and indicates the exact position through the rod wall – independent of the hydraulic fluid.
- The pressure resistant sensor rod is installed into a bore in the piston rod.

#### Hydraulics sealing

There are two ways to seal the flange contact surface (Fig. 43):

1. Sealing via an O-ring (e.g. 22.4 × 2.65 mm, 25.07 × 2.62 mm) in a cylinder end cap groove (for threaded flange »C«/»D«)
2. Sealing via an O-ring 16.4 × 2.2 mm (part no. 560 315) in the flange undercut.

For threaded flange (¾"-16 UNF-3A) »D«/»T«:

O-ring 16.4 × 2.2 mm (0.65 × 0.09 in.) (part no. 560 315)

For threaded flange (M18×1.5-6g) »C«/»M«:

O-ring 15.3 × 2.2 mm (0.60 × 0.09 in.) (part no. 401 133)

In the case of threaded flange M18×1.5-6g provide a screw hole based on ISO 6149-1 (Fig. 44). See ISO 6149-1 for further information.

Fig. 43: Possibilities of sealing

- Seat the flange contact surface completely on the cylinder mounting surface.
- The cylinder manufacturer determines the pressure-resistant gasket (copper gasket, O-ring, etc.).
- The position magnet should not grind on the sensor rod.
- The piston rod drilling ( $\geq \varnothing 13$  mm ( $\geq \varnothing 0.51$  in.)) depends on the pressure and piston speed.
- Adhere to the information relating to operating pressure.
- Protect the sensor rod against wear.

Notice for metric threaded flanges

<b>RD5-X-C</b>									
M18×1.5	55	≥ 13	24.5	19.8	2.4	28.5	2	26	15°
<b>RD5-X-M</b>									
M18×1.5	30	≥ 13	24.5	19.8	2.4	28.5	2	26	15°

Controlling design dimensions are in millimeters

Fig. 44: Notice for metric threaded flange M18×1.5-6g based on DIN ISO 6149-1

#### 4.7.2 Installation of RD5 with pressure fit flange

##### Cylinder mounting

Install the rod using the pressure fit flange. Seal it off by means of the O-ring and the back-up ring. Block the pressure fit flange using a shoulder screw (Fig. 45). For details of the pressure fit flange »S« see Fig. 46. Also note the mounting examples in Fig. 48 and Fig. 49.

Fig. 45: Example of mounting detail: Shoulder screw 8-M6 (ISO 7379) with internal hexagon

Fig. 46: Pressure fit flange »S« details

##### Note for cylinder installation:

- The position magnet should not grind on the sensor rod.
- The piston rod drilling ( $\geq \text{Ø } 13 \text{ mm}$  ( $\geq \text{Ø } 0.51 \text{ in.}$ )) depends on the pressure and piston speed.
- Adhere to the information relating to operating pressure.
- Protect the sensor rod against wear.

**4.7.3 Installation of RD5 sensor electronics housing**

Mount the sensor electronics housing with 2 or 4 × M6×45 (ISO 4762) screws via the mounting block. Note the fastening torque of 6 Nm (Fig. 47). Position the sensor electronics housing so that there is sufficient space for the connection to the sensor rod and to the control unit. The sensor electronics mounting blocks »G« and »S« have a side connection, while the sensor electronics mounting blocks »B« und »E« have a bottom connection (Fig. 48 & Fig. 49). The »B« or »E« mounting blocks are secured and sealed over a borehole where the sensor rod cable is routed.

Fig. 47: Mounting of RD5 sensor electronics housing

Fig. 48: RD5 with bottom connection

Fig. 49: RD5 with side connection

**4.7.4 Installation the RD5 sensor rod cables**

- There are three different cable types on the sensor rod:
- Type »W« has separate wires for the smallest space installations. Since the separate wires have no electrical shielding, they must be mounted in an appropriately shielded environment, such as a hydraulic cylinder end cap or other metal enclosure. Without such protection, electromagnetic interference can affect the performance of the sensor.
  - Type »K« has a small bending radius that allows for tight space installations.
  - Type »J« offers high temperature capability (up to 120 °C) and robust EMC protection. This allows for long cable runs between the sensor rod and the sensor electronics.

Installing the sensor rod cable/separate wires should always observe the minimum allowed bending radius (Fig. 50) and follow industry guidelines for maintaining sufficient distances from EMC noise sources, e.g. power cables, motor cables, variable frequency drives, relays, etc.

Image	Type	Advantage
	»W«	<ul style="list-style-type: none"> <li>• Single wires allows small bend radius</li> <li>• For short distances up to 50 cm</li> </ul>
	»K«	<ul style="list-style-type: none"> <li>• PUR cable with min. bend radius of 24 mm</li> <li>• For distances up to 1.15 m</li> </ul>
	»J«	<ul style="list-style-type: none"> <li>• FEP cable with min. bend radius of 57 mm</li> <li>• For great distances up to 20 m</li> </ul>

Fig. 50: Sensor rod cables

#### 4.7.5 Connecting the sensor rod to the sensor electronics

There are four different connector options for use on the sensor rod cable:

- Type »G« is an M12 connector for side connection to the sensor electronics with the compact mounting block.
- Type »S« is an M16 connector for side connection to the sensor electronics with the classic mounting block.
- Type »E« is a compact inline flat connector for bottom connection to the sensor electronics with the compact or classic mounting block.
- Type »W« is an M12 square panel mount connector. This connector requires the RD5-C joining cable to complete the connection to the sensor electronics with the compact mounting block for side connection. The installation of the M12 square panel mount connector is described below.

Connect the sensor rod connector to the mating connector on the sensor electronics mounting block (Fig. 51).

Fig. 51: Connecting sensor rod connector to sensor electronics housing

#### Installation of the M12 square panel mount connector (type »W«)

The M12 square panel mount connector is installed in a cylinder end cap (Fig. 52). The connector consists of the contact carrier (black plastic part) and the metal flange.

Fig. 52: M12 square panel mount connector installed in a cylinder

To install this connector, follow these steps:

- Before installing the connector, separate the contact carrier from the metal flange. Press the locking levers and pull the contact carrier out of the metal flange.
- Carefully route the contact carrier through the borehole in the cylinder wall. Ensure that the separate wires are not guided along sharp or pointed edges.
- Insert the contact carrier in the desired position into the metal flange until it snaps into place. The dimensions for attaching the metal flange to the cylinder are shown in Fig. 53.
- Lubricate the connector's O-ring and secure the metal flange down with 4 × M3 screws.
- Use the RD5-C joining cable to connect the M12 square panel mount connector to the sensor electronics mounting block. See section 4.7.7 for ordering the RD5-C joining cable.

Fig. 53: Panel cut-out dimensions for the type »W« M12 square panel mount connector

#### 4.7.6 Replacing sensor rod or sensor electronics

The RD5 offers you the option of ordering the sensor rod or sensor electronics separately and connecting them to already installed sensor electronics or a sensor rod. Install the replacement components as described in sections 4.7.1, 4.7.2, and 4.7.3. Connect the replacement components to the already installed component using the cable on the sensor rod. As soon as you switch on the power supply, the two components will communicate with each other, so you do not need to adjust any further settings. If you have made changes to the previously installed sensor, such as adjusting the resolution or measuring direction, make sure that these are also adjusted on the newly installed component. The order code for a separate sensor rod or sensor electronics is shown below.

#### Order code of RD5-R (sensor rod only)

<b>e</b>	<b>Connection type</b>													
D	5	6	2 × M12 female connectors (D-coded), 1 × M8 male connector											
D	5	8	2 × M12 female connectors (D-coded), 1 × M12 male connector (A-coded)											

<b>f</b>	<b>System</b>													
1	Standard													

<b>g</b>	<b>Output</b>													
U	2	0	1	EtherNet/IP™, position and velocity (1...2 magnet(s))										

**NOTICE**

The hanging 6 conductor flat connector »E« used on the RD5-E is not compatible with the RD4 and RDV models that use two flat connectors (2 & 4 conductors). When converting from the RD4/ RDV (with bottom connection) to the RD5, both the sensor rod and the sensor electronics have to be changed at the same time.

**NOTICE**

- Specify number of magnets for your application and order the magnets separately.
- The number of magnets is limited by the stroke length. The minimum allowed distance between magnets (i.e. front face of one to the front face of the next one) is 75 mm (3 in.).
- Use magnets of the same type for multi-position measurement.

As shown in the example below, to order the appropriate RD5-E electronics, use “RD5E” for the first 4 characters and repeat the same RD5-K characters from positions 17–27 to complete a new RD5-E model number in the RD5-E positions 5–15 for the electronics only.

**Order example:**

Previously ordered RD5-K sensor:

#### 4.7.7 Order code of Temposonics® RD5-C (joining cable)

The RD5-C joining cable is required when the sensor rod connector is the M12 square panel mount connector »W«. For ordering the joining cable, use the RD5-C model number configurator below.

1	2	3	4	5	6	7	8	9	10	11
R	D	5	C	J					C	M
a			b	c				d		

a	Sensor model										
R	D	5	Detached sensor electronics								

b	Sensor component									
C	Joining cable (M12 to M12)									

c	Design										
J	X	X	X	X	FEP cable, length in centimeters (range 0050...2000 cm) Standard lengths are: 0050, 0100, 0300, 0500, 1000, 1500, 2000 cm						
Non-standard lengths for the joining cable are available; must be encoded in 1 cm increments and within the specified range											

d	Unit of measure									
C	M	Length in centimeters								

<b>NOTICE</b>										
<ul style="list-style-type: none"> <li>• Only use the RD5-C joining cable when using the M12 square panel mount connector »W«.</li> <li>• Use only one RD5-C joining cable between the sensor rod and the sensor electronics.</li> </ul>										

4.8 Installation and design of Temposonics® RDV

RDV with bottom cable entry, example: Connector D56 (connector outlet)

RDV with side cable entry, example: Connector D58 (connector outlet)

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

Fig. 54: Temposonics® RDV sensor electronics housing

Fig. 55: Temposonics® RDV flanges

The steps mentioned above are explained in the following sections.

#### 4.8.1 Installation of RDV with threaded flange

Fix the sensor rod via threaded flange M18×1.5-6g or ¾"-16 UNF-3A. Note the fastening torque shown in Fig. 56. Lightly oil the thread before tightening.

Fig. 56: Mounting example of threaded flange »C«/»D«, »M«/»T«

#### Installation of a rod-style sensor in a fluid cylinder

The rod-style version has been developed for direct stroke measurement in a fluid cylinder. Mount the sensor via threaded flange or a hex nut.

- Mounted on the face of the piston, the position magnet travels over the rod without touching it and indicates the exact position through the rod wall – independent of the hydraulic fluid.
- The pressure resistant sensor rod is installed into a bore in the piston rod.

#### Hydraulics sealing

There are two ways to seal the flange contact (Fig. 57):

1. Sealing via an O-ring (e.g. 22.4 × 2.65 mm, 25.07 × 2.62 mm) in a cylinder end cap groove (for threaded flange »C«/»D«)
  2. Sealing via an O-ring 16.4 × 2.2 mm (part no. 560 315) in the flange undercut.
- For threaded flange (¾"-16 UNF-3A) »D«/»T«: O-ring 16.4 × 2.2 mm (0.65 × 0.09 in.) (part no. 560 315)  
For threaded flange (M18×1.5-6g) »C«/»M«: O-ring 15.3 × 2.2 mm (0.60 × 0.09 in.) (part no. 401 133)

In the case of threaded flange M18×1.5-6g provide a screw hole based on ISO 6149-1 (Fig. 58). See ISO 6149-1 for further information.

Fig. 57: Possibilities of sealing

- Seat the flange contact surface completely on the cylinder mounting surface.
- The cylinder manufacturer determines the pressure-resistant gasket (copper gasket, O-ring, etc.).
- The position magnet should not grind on the sensor rod.
- The piston rod drilling ( $\geq \varnothing 13 \text{ mm}$  ( $\geq \varnothing 0.51 \text{ in.}$ )) depends on the pressure and piston speed.
- Adhere to the information relating to operating pressure.
- Protect the sensor rod against wear.

Notice for metric threaded flanges									
Thread (d <sub>1</sub> × P)	d <sub>2</sub>	d <sub>3</sub>	d <sub>4</sub>	d <sub>5</sub> +0.1 0	L <sub>1</sub> +0.4 0	L <sub>2</sub>	L <sub>3</sub>	L <sub>4</sub>	Z° ±1°
<b>RDV-C</b>									
M18×1.5	55	≥ 13	24.5	19.8	2.4	28.5	2	26	15°
<b>RDV-M</b>									
M18×1.5	30	≥ 13	24.5	19.8	2.4	28.5	2	26	15°

Controlling design dimensions are in millimeters

Fig. 58: Notice for metric threaded flange M18×1.5-6g based on DIN ISO 6149-1

#### 4.8.2 Installation of RDV with pressure fit flange

##### Cylinder mounting

Install the rod using the pressure fit flange. Seal it off by means of the O-ring and the back-up ring. Block the pressure fit flange using a shoulder screw (Fig. 59). For details of the pressure fit flange »S« see Fig. 60. Also note the mounting examples in Fig. 61 and Fig. 62.

Fig. 59: Example of mounting detail: Shoulder screw 8-M6 (ISO 7379) with internal hexagon

Fig. 60: Pressure fit flange »S« details

##### Note for cylinder installation:

- The position magnet should not grind on the sensor rod.
- The piston rod drilling ( $\geq \text{Ø } 13 \text{ mm}$  ( $\geq \text{Ø } 0.51 \text{ in.}$ )) depends on the pressure and piston speed.
- Adhere to the information relating to operating pressure.
- Protect the sensor rod against wear.

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

### 4.8.3 Installation of RDV's sensor electronics housing

The following section explains the connection of an RDV sensor with bottom cable entry (Fig. 61) and side cable entry (Fig. 62) based on RDV-S. The sensor electronics housing of RDV sensors with threaded flange are mounted in the same way.

#### Sensor electronics housing with bottom cable entry

Connect the rod via the connector to the sensor electronics housing. Mount the sensor electronics housing so that you can lead the cables below the bottom of the housing. Thus the sensor system including the connection cables is fully encapsulated and protected against external disturbances (Fig. 61). Note the bending radius of the cable if you run the cable between sensor electronics housing and rod (see Fig. 55).

Fig. 61: Mounting example of pressure fit flange »S« and sensor electronics housing with bottom cable entry

#### Sensor electronics housing with side cable entry

Connect the rod via the cable to the sensor electronics housing on the side. Encapsulate the sensor system including the connection cables (Fig. 62). Note the bending radius of the cable if you run the cable between sensor electronics housing and rod (see Fig. 62).

Fig. 62: Mounting example of pressure fit flange »S« and sensor electronics housing with side cable entry

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

### NOTICE

To fulfill the requirements of EMC standards for emission and immunity the following points are necessary:

- The sensor electronics housing has to be connected to machine ground (Fig. 95).
- The cable between the sensor and the electronics must be integrated into a metallic housing.

Connect the flange to the sensor electronics housing via the molex connectors for bottom cable entry respectively via the 6 pin cable for side cable entry.

The connection cable between the sensor rod and sensor electronics at the side cable entry has the following properties:

Material: PUR jacket; black  
Features: Highly flexible, mostly oil & flame resistant  
Cable Ø: 5.9 mm (0.23 in.)  
Cross section: 3 × 2 × 0.14 mm<sup>2</sup>  
Bending radius: 4 × D  
(fixed installation)  
Operating temperature:  
−40...+80 °C (−40...+176 °F)

Note these properties when installing the sensor.

### 4.8.4 Mounting of sensor electronics housing

Mount the sensor electronics housing with 4 × M6×45 (ISO 4762) screws via the mounting block. Note the fastening torque of 6 Nm.

Fig. 63: Mounting of RDV sensor electronics housing (example of bottom cable entry)

## 4.9 Magnet installation

### Typical use of magnets

Magnet	Typical sensors	Benefits
 <b>Ring magnets</b>	<b>Rod model</b> (RH5, RM5, RF5, RFV, RD5, RDV)	<ul style="list-style-type: none"> <li>Rotationally symmetrical magnetic field</li> </ul>
 <b>U-magnets</b>	<b>Profile &amp; rod models</b> (RP5, RH5, RM5, RF5, RFV, RD5, RDV)	<ul style="list-style-type: none"> <li>Height tolerances can be compensated, because the magnet can be lifted off</li> </ul>
 <b>Block magnets</b>	<b>Profile &amp; rod models</b> (RP5, RH5, RM5, RF5, RFV, RD5, RDV)	<ul style="list-style-type: none"> <li>Height tolerances can be compensated, because the magnet can be lifted off</li> </ul>
 <b>Magnet sliders</b>	<b>Profile models</b> (RP5)	<ul style="list-style-type: none"> <li>The magnet is guided by the profile</li> <li>The distance between the magnet and the waveguide is strictly defined</li> <li>Easy coupling via the ball joint</li> </ul>

Fig. 64: Typical use of magnets

### Mounting ring magnets, U-magnets & block magnets

Install the magnet using non-magnetic material for mounting device, screws, spacers etc.. The magnet must not grind on the sensor rod. Alignment errors are compensated via the air gap.

- Permissible surface pressure: Max. 40 N/mm<sup>2</sup> (only for ring magnets and U-magnets)
- Fastening torque for M4 screws: 1 Nm; use washers, if necessary
- Minimum distance between position magnet and any magnetic material has to be 15 mm (0.6 in.) (Fig. 67)
- If no other option exists and magnetic material is used, observe the specified dimensions (Fig. 67)

#### NOTICE

- Mount ring magnets and U-magnets concentrically.
- Mount block magnets centrally over the sensor rod or the sensor profile.
- The maximum permissible air gap must not be exceeded (Fig. 65/ Fig. 66). Take care to mount the primary sensor axis in parallel to the magnet path in order to avoid damage to the carriage, magnet and sensor rod/sensor profile.

Fig. 65: Mounting of U-magnet (part no. 251 416-2)

Fig. 66: Mounting of block magnet K (part no. 251 298-2) and block magnet L (part no. 403 448)

### Magnet mounting with magnetic material

When using magnetic material the dimensions of Fig. 67 must be observed.

- If the position magnet aligns with the drilled piston rod
- If the position magnet is set further into the drilled piston rod, install another non-magnetic spacer (e.g. part no. 400 633) above the magnet.

Fig. 67: Installation with magnetic material

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

**Rod sensors with stroke lengths  $\geq$  1 meter (3.3 ft.)**

Support horizontally installed rod sensors with a stroke length of 1 meter and more (3.3 ft.) mechanically. Without using a support, the sensor rod bends over and the rod and the position magnet may be damaged. A false measurement result is also possible. Longer rods require evenly distributed mechanical support over the entire length (e.g. part no. 561 481). Use an U-magnet (Fig. 68) for measurement.

Fig. 68: Example of sensor support with the fixing clip (part no. 561 481)

**Start- and end positions of the position magnets**

Consider the start and end positions of the position magnets during the installation. To ensure that the entire stroke length is electrically usable, the position magnet must be mechanically mounted as follows.

Fig. 69: Start- and end positions of magnets for RP5

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

Fig. 70: Start- and end positions of magnets for RH5

Fig. 71: Start- and end positions of magnets for RM5

Fig. 72: Start- and end positions of magnets for RF5

Fig. 73: Start- and end positions of magnets for RFV with ring- and U-magnets

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

Fig. 74: Start- and end positions of magnets RFV with block magnets

Fig. 75: Start- and end positions of magnets for RD5 with ring- and U-magnets

Fig. 76: Start- and end positions of magnets for RD5 with block magnet

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

Fig. 77: Start- and end positions of magnets RDV with ring- and U-magnets

**NOTICE**

On all sensors, the areas left and right of the active stroke length are provided for null and dead zone. These zones should not be used for measurement, however the active stroke length can be exceeded.

Fig. 78: Start- and end positions of magnets RDV with block magnets

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

### Multi-position measurement

The minimum distance between the magnets is 75 mm (3 in.).

Fig. 79: Minimum distance for multi-position measurement (RH5, RP5, RF5, RFV, RM5)

Fig. 80: Minimum distance for multi-position measurement (RD5, RDV)

### NOTICE

Use magnets of the same type for multi-position measurement. Do not fall below the minimum distance between the magnets of 75 mm (3 in.) for multi-position measurement. Contact Temposonics if you need a magnet distance < 75 mm (3 in.).

#### 4.10 Alignment of the magnet with the option “Internal linearization”

The internal linearization offers improved linearity of the sensor. The option must be specified in the order code of the sensor. The internal linearization is set for the sensor during production. A sensor with internal linearization is delivered with the magnet with which the sensor was squared during production. In order to achieve the best possible result, Temposonics recommends to operate the sensor with the supplied magnet.

For the internal linearization, the following magnets can be used:

- Ring magnet OD33 (part no. 253 620), for RH5, RM5 and RDV only
- U-magnet OD33 (part no. 254 226)
- Ring magnet OD25.4 (part no. 253 621), for RH5, RM5 and RDV only
- Magnet slider S (part no. 252 182), for RP5 only
- Magnet slider N (part no. 252 183), for RP5 only
- Magnet slider V (part no. 252 184), for RP5 only
- Magnet slider G (part no. 253 421), for RP5 only

The ring magnet and U-magnet will be marked for the internal linearization. During the installation, the magnets have to be aligned to the sensor electronics housing or the flange of the RDV (see Fig. 81, Fig. 82, Fig. 83, Fig. 84 and Fig. 85).

##### For RH5 EtherNet/IP™ sensors with ring magnet/U-magnet applies:

- Install the magnet until the marking on the magnet points to the sensor electronics housing.
- The marking on the magnet points to the same direction as the elongated status LED in the lid of the sensor electronics housing.

Fig. 81: Magnet alignment of ring magnet for RH5 EtherNet/IP™ with internal linearization

##### For RP5 EtherNet/IP™ sensors with U-magnet applies:

- Install the magnet until the marking on the magnet points to the sensor electronics housing.
- The marking on the magnet points to the same direction as the elongated status LED in the lid of the sensor electronics housing.

Fig. 82: Magnet alignment of U-magnet for RP5 EtherNet/IP™ with internal linearization

##### For RP5 EtherNet/IP™ sensors with magnet slider applies:

- ① Install the magnet sliders “S”, “N” and “G” until the additional hole in the magnet points towards the sensor electronics housing.
- ② Install the magnet slider “V” until the joint points to the end of the profile.

Fig. 83: Magnet alignment of magnet slider for RP5 EtherNet/IP™ with internal linearization

**For RDV EtherNet/IP™ sensors with ring magnet/U-magnet applies:**

- Install the magnet so that the marking on the magnet faces the sensor flange.
- The marking on the magnet points in the same direction as the marking on the sensor flange.

Fig. 84: Magnet alignment of ring magnet for RDV EtherNet/IP™ with internal linearization using the example of a »S« flange

**For RM5 EtherNet/IP™ sensors with ring magnet/U-magnet applies:**

- Install the magnet so that the marking on the magnet faces the super shield housing.
- The line on the magnet points in the same direction as the marking on the super shield housing.

Fig. 85: Magnet alignment of ring magnet for RM5 EtherNet/IP™ with internal linearization

**The internal linearization of the sensor is carried out under the following conditions:**

- Supply voltage +24 VDC ± 0.5
- Operating time > 30 min
- No shock and no vibration
- Eccentricity of the position magnet to central axis of the sensor < 0.1 mm

**NOTICE**

The generated linearization might deviate from the linearity tolerances regarding different environmental conditions. In addition, the use of a different position magnet or more position magnets may cause differences.

## 4.11 Replacement of base unit

### 4.11.1 Replacement of base unit on the RH5/RFV/RF5 model

The base unit of the sensor model RH5 (RH5-B) is replaceable as shown in Fig. 86 and Fig. 87 for the sensor designs »M«, »S« and »T«. The sensor can be replaced without interrupting the hydraulic circuit. This also applies to the RFV-B/RF5-B sensor, which is installed in the optional HD, HL and HP sensor rod.

Fig. 86: Replacement of the base unit (e.g. RH5 sensor), part 1

3. Insert the new base unit.  
Mount the ground lug on a screw.  
Tighten the screws.

Fig. 87: Replacement of the base unit (e.g. RH5 sensor), part 2

#### NOTICE

- When replacing the base unit, make sure that no humidity enters the sensor tube. This may damage the sensor.
- Secure the base unit screws, e.g. using Loctite 243, before reinstalling.
- If the R-Series V replaces a predecessor model of the R-Series, the plastic tube in the sensor rod must be removed.
- Make sure the O-ring (part no. 562 003) is correctly fitted between the flange and the base unit.
- The O-ring is secured with an adhesive strip. Remove the adhesive strip before tightening before reinstalling the base unit (see illustration "Remove adhesive strips").

Fig. 88: Remove adhesive strips

Remove the transport cap at the end of the flexible sensor element before installing an RH5-B-F (Fig. 67). Slowly push the flexible sensor element into the sensor rod so that the air inside the rod can escape. Observe the minimum bending radius of 100 mm and the instructions for handling and installing an RF5 in chapter 4.5.

Fig. 89: Remove the transport cap from the RH5-B-F before installation

#### 4.11.2 Replacement of base unit on the RM5 model

A base unit RM5-B is installed in the super shield housing of the v RM5 (Fig. 90). The base unit can be replaced without interrupting the hydraulic circuit.

Fig. 90: Base unit in the super shield housing of the RM5

Fig. 91: Replacement of the base unit on model RM5, part 1

Fig. 92: Replacement of the base unit on model RM5, part 2

Continued on next page

7. Insert the new base unit.  
Screw the base unit tight.  
Secure the screws of the base unit before re-installing,  
e.g. with Loctite 243.

8. Attach the connectors to the base unit in the super shield housing.

9. Place the lid on the super shield housing.  
Screw the lid tight.  
Secure the screws of the lid before reassembly,  
e.g. with Loctite 243.

Fig. 93: Replacement of the base unit on model RM5, part 3

10. Carefully pull the excess cables out of the super shield housing. Tighten the pressure screw (marked gray) of the cable glands until the sealing insert and pressure screw are at the same height.  
Secure the cable glands before reassembly, e.g. with Loctite 243.

Fig. 94: Replacement of the base unit on model RM5, part 4

**NOTICE**

When replacing the base unit, make sure that no humidity enters the sensor tube. This may damage the sensor.

## 4.12 Electrical connection

Placement of installation and cabling have decisive influence on the sensor's electromagnetic compatibility (EMC). Hence correct installation of this active electronic system and the EMC of the entire system must be ensured by using suitable metal connectors, shielded cables and grounding. Overvoltages or faulty connections can damage its electronics despite protection against wrong polarity.

### NOTICE

1. Do not mount the sensors in the area of strong magnetic or electric noise fields.
2. Never connect/disconnect the sensor when voltage is applied.

### Instructions for connection

- Use low-resistant twisted pair and shielded cables. Connect the shield to ground externally via the controller equipment.
- Keep control and signal cables separate from power cables and sufficiently far away from motor cables, frequency inverters, valve lines, relays, etc..
- Use only connectors with metal housing and connect the shielding to the connector housing.
- Keep the connection surface at both shielding ends as large as possible. Connect the cable clamps to function as a ground.
- Keep all non-shielded leads as short as possible.
- Keep the earth connection as short as possible with a large cross section. Avoid ground loops.
- With potential differences between machine and electronics earth connections, no compensating currents are allowed to flow across the cable shielding.

#### Recommendation:

Install potential compensating leads with large cross section, or use cables with separate double shielding, and connect only one end of the shield.

- Use only stabilized power supplies in compliance with the specified electrical ratings.

### Grounding of profile and rod sensors

Connect the sensor electronics housing to machine ground. Ground R-Series V sensors via ground lug as shown in Fig. 95. Note the installation example for grounding an RM5 sensor in Fig. 96. In addition you can ground the sensor types RH5, RM5, RF5 and RFV via thread.

Fig. 95: Grounding via ground lug on the example of an RM5 sensor (left)/RH5 sensor (right)

Fig. 96: Installation example for grounding of RM5 sensor

### NOTICE

Secure the socket head screw before reassembly, e.g. with Loctite 243.

**Connector wiring**

Connect the sensor directly to the control system, indicator or other evaluating systems as follows:

Mounting accessories

**Sensor rod with threaded flange with flat-face (M18x1.5-6g) and O-ring**  
HD [length mm: XXXX] M  
HD [length in.: XXX.X] U

Pressure rod Ø: 12.7 mm (0.5 in.)  
Length: 100...7500 mm (4...295 in.)  
Operating pressure: 350 bar (5076 psi)  
Material flange:  
Stainless steel 1.4305 (AISI 303)  
Material rod:  
Stainless steel 1.4301 (AISI 304)

**Sensor rod with threaded flange with flat-face (3/4"-16 UNF-3A) and O-ring**  
HL [length mm: XXXX] M  
HL [length in.: XXX.X] U

Pressure rod Ø: 12.7 mm (0.5 in.)  
Length: 100...7500 mm (4...295 in.)  
Operating pressure: 350 bar (5076 psi)  
Material flange:  
Stainless steel 1.4305 (AISI 303)  
Material rod:  
Stainless steel 1.4301 (AISI 304)

**Sensor rod with threaded flange with raised-face (3/4"-16 UNF-3A) and O-ring**  
HP [length mm: XXXX] M  
HP [length in.: XXX.X] U

Pressure rod Ø: 12.7 mm (0.5 in.)  
Length: 100...7500 mm (4...295 in.)  
Operating pressure: 350 bar (5076 psi)  
Material flange:  
Stainless steel 1.4305 (AISI 303)  
Material rod:  
Stainless steel 1.4301 (AISI 304)

**Profile with flange**  
HFP [length mm: XXXXX] M  
HFP [length in.: XXXX.X] U

Length: Max. 20,000 mm (max. 787 in.)  
Ingress protection: IP30  
Material: Aluminum

Color of connectors and cable jacket may change. Color codes for the individual wires and technical properties remain unchanged.

## 5. Commissioning

### 5.1 Initial start-up

The R-Series V EtherNet/IP™ position sensor transmits position and velocity values via the EtherNet/IP™ output. EtherNet/IP™ was developed by Rockwell Automation and the Open Device-Net Vendor Association (ODVA) and is a standard for transmissions in Industrial Ethernet. The specification and maintenance of EtherNet/IP™ is managed by ODVA. The sensor and the corresponding EDS file are certified by the ODVA.

The R-Series V EtherNet/IP™ supports Device Level Ring (DLR). DLR technology enables the creation of a fault-tolerant network so that reliable operation can be achieved in a ring topology.

EtherNet/IP™ typically achieves cycle times of around 10 ms. The R-Series V EtherNet/IP™ supports the protocol extension CIP-Sync™ (Common Industrial Protocol). This enables synchronization of the devices in the network and therefore shorter cycle times. A master clock serves as the basis, which synchronizes the network with an accuracy of a few nanoseconds. The time offset between communication partners is determined and taken into account. The data is provided with an exact time stamp and the time of measurement is triggered for position detection. The time required for evaluating and transmission of the position values can be compensated retrospectively due to the time stamp of the measurement.

### 5.2 LED status

A diagnostic display on the lid of the sensor informs about the current status of the sensor. The R-Series V EtherNet/IP™ is equipped with three LEDs:

- LED for status indication (condition indicator)
- LED for activity of the Ethernet connection at port 1 (link activity)
- LED for activity of the Ethernet connection at port 2 (link activity)

**EtherNet/IP™ LED status**

**Module status LED**

Green	Red	Information
● ON	○ OFF	IP address configured
● Flashing	○ OFF	IP address not configured
○ OFF	● Flashing	Duplicate of IP address recognized

**Network status LED**

Green	Red	Information
● ON	○ OFF	Connection established
● Flashing	○ OFF	No connection
○ OFF	● ON	Unrecoverable error
○ OFF	● Flashing	Recoverable error

Fig. 101: LED status display, part 1

Fig. 102: LED status display, part 2

**NOTICE**

**Observe during commissioning**

1. Before initial switch-on, check carefully if the sensor has been connected correctly.
2. Position the magnet in the measuring range of the sensor during first commissioning and after replacement of the magnet.
3. Ensure that the controller, to which the sensor is connected, does not react in an uncontrolled way.
4. Ensure that the sensor is ready and in operation mode after switching on. The connection indicator LEDs will show green for on and red for off.

**5.3 Topologies and hubs**

EtherNet/IP™ supports various topologies when building up a network. Thus, the usage of linear, star, ring and tree topologies are supported. A hub is integrated in devices like the R-Series V EtherNet/IP™ sensors. With integrated hubs, a power failure will cause a communication interruption to the subsequent devices. This can be avoided for example by extending a line structure to a ring structure.

## 6. Programming and configuration

### 6.1 IP address configuration

An example of configuring a Temposonics® EtherNet/IP™ sensor will be shown using an Allen-Bradley CompactLogix L35E controller and the RSLogix 5000 software from Rockwell. This example is written with the understanding that the customer already has an EtherNet/IP™ capable controller and a working EtherNet/IP™ network. The procedure to incorporate a Temposonics® EtherNet/IP™ sensor into a network is shown in the following 3 steps. Step 1 describes setting the IP address of the sensor and step 2 installing the Temposonics® EtherNet/IP™ EDS file (download at [www.temposonics.com](http://www.temposonics.com)). To utilize the EDS file with the add-on profile feature, the RSLogix 5000 software must be version 20 or later. By using the EDS add-on profile, the sensor parameters and configuration data are loaded automatically to complete steps 3.1 and 3.2. If not installing the sensor EDS file, or if using an earlier version of the RSLogix 5000 software, chapters 7.3 through 7.5 describe how to manually load the sensor parameter data. Also, if needed later, the descriptions in step 3.2 can help when reviewing the sensor parameter data and for making any changes.

### 6.2 Setting the IP address of the sensor

Each sensor comes from the factory with DHCP mode active and a unique MAC ID (see sensor label). This allows you to communicate with the sensor in order to configure the sensor for your network. Before you can use a sensor on your network you must first assign it a static, unused IP address on your network. In the following example we will use Rockwell's BOOTP/DHCP Server program to assign an IP address to the sensor.

**6.2.1** Open the **BOOTP/DHCP Server** software.

- ▶ The "BOOTP/DHCP Server" window opens.

**6.2.2** To add your sensor to the "Relation List", click the **New** button in the "Relation List" pane.

- ▶ The "New Entry" window opens.

Fig. 103: Create new relation list entry

### NOTICE

1. Choose an IP address that is not being used on your network or subnetwork.
2. After the IP address is assigned to the sensor, record the IP address and have it available as you will need it to communicate with the sensor.

**6.2.3** In the "New Entry" window, enter the **MAC ID** (see sensor label). Enter an unique **IP address** you will use for the sensor, **record the IP address** and click **OK**.

Fig. 104: Enter MAC ID and unique IP address

**6.2.4** Verify that your unique IP address and MAC ID appear in the “Relation List” window. If the relation list window does not contain both MAC ID and IP address, repeat steps 6.2.2 to 6.2.4. Otherwise, continue with step 6.2.5.

Fig. 105: Populated relation list

**6.2.5** Apply power to the sensor. The sensor should take around 10 to 15 seconds to begin to broadcast its MAC ID.

**6.2.6** Verify that your IP address and MAC ID appear in the “Request History” box.

Fig. 106: Request history shows MAC ID and IP address

**NOTICE**

Step 6.2.7 will make your sensors unique IP address static. It will disable BOOTP and DHCP, and the IP address will be stored in the EEPROM of the sensor.

**6.2.7** Click to select your sensor in the “Relation List” box and click the disable **BOOTP/DHCP** button.

**6.2.8** The “Status” message at the bottom of the window will read “Command Successful” if the disable command was successful. The sensor is now assigned a static IP address. If needed, repeat step 6.2.7 until the disable command is successful.

Fig. 107: Sensor shows the static IP address

**6.2.9** Exit the BOOT/DHCP Server software. If installing the Temposonics® EtherNet/IP™ EDS file (download at [www.temposonics.com](http://www.temposonics.com)) continue with chapter 7.1. To utilize the EDS file, the RSLogix 5000 software must be version 20 or later. If not installing the sensor EDS file, or if using an earlier version of the RSLogix 5000 software, the sensor parameter data must be manually loaded. In that case, continue with steps 2 and 3.

## 7. Integration in RSLogix 5000

### 7.1 Install the Temposonics® EtherNet/IP™ EDS file

The EDS file for the R-Series V EtherNet/IP™ sensor is available at [www.temposonics.com](http://www.temposonics.com). It provides full backwards compatibility to the previous generation of R-Series EtherNet/IP™ sensors.

7.1.1 Open the RSLogix 5000 software interface.

7.1.2 Click the Tools menu and select “EDS Hardware Installation Tool”.

Fig. 108: Select the “EDS Hardware Installation Tool”

7.1.3 The “EDS Wizard” window opens. Click **Next**. Select “Register an EDS file(s)” in the “Options” window and click **Next** (Fig. 110).

Fig. 109: EDS wizard launchscreen

Fig. 110: Register an EDS file

7.1.4 The “Registration” window opens, click **Browse** and select the EDS file provided either with the sensor or downloaded from the Temposonics website. Click **Next**.

Fig. 111: Enter the path to the EDS file

7.1.5 If the installation completed successfully, the “EDS File installation test results” window displays. Click **Next**.

Fig. 112: Confirmation of path to the EDS file

7.1.6 The “Final Task Summary” window opens, click **Next**.

Fig. 113: Confirmation of EDS file origin (Temposonics was previously MTS Sensors)

7.1.7 Click **Finish**.

Fig. 114: EDS installation completed

**7.2 Add sensor to I/O configuration using EDS file**

**7.2.1** After completing the EDS wizard, return to the main window of RSLogix 5000. In the controller organizer sidebar, expand the I/O Configuration tree and right-click your network. Select “New Module”.

Fig. 115: Add a new module to the RSLogix 5000 IO tree

**7.2.2** In the “Select Module Type” window, choose “R-Series EtherNet/IP” and click **Create**.

Fig. 116: Create new module tree

**7.2.3** In the “New Module” window, enter a name in the “Name” field, select the IP address radio button and enter the static IP address that is assigned to the sensor. Click **OK** and close the “New Module” window.

Fig. 117: Confirm the new module settings

7.2.4 Verify that the new sensor is listed in the I/O Configuration tree.

Fig. 118: New module on the network

The Temposonics® (previously MTS Sensors) EtherNet/IP™ sensor is now added to the network and connected, ready to use.

**NOTICE**

If the sensor is disconnected, a yellow warning sign (shown below) will appear over the module icon.

7.3 Add sensor to I/O configuration without using EDS file

Before you begin, you will need the sensors static IP address you recorded in from step 6.2.7.

- 7.3.1 Open the RSLogix 5000 software interface.
- 7.3.2 Open the controllers' directory tree. Click I/O configuration, then right click your network. Select "New Module". The "Select Module" window opens.
- 7.3.3 In the "Select Module" window, select "Generic Ethernet Module" and press **OK**. The "New Module" window opens.

Fig. 119: Add a new module to the RSLogix 5000 IO tree

Fig. 120: Add a new generic module tree

7.3.4 In the “New Module” window (Fig. 121) perform step 7.3.4.1 – 7.3.4.4 to configure the new generic ethernet module to the R-Series V EtherNet/IP™ sensor.

**NOTICE**

Enter the “Connection Parameters” and “Comm Format” exactly in the following order in step 7.3.4.1 – 7.3.4.4, otherwise your sensor may not function properly.

- 7.3.4.1 In the “Name” field enter the “Sensor Name” as described in the “I/O Configuration tree” (it might be beneficial to include reference to the device ID).
- 7.3.4.2 In the “Comm Format” field, select the entry “Input Data - DINT - Run/Program” from the drop down menu
- 7.3.4.3 In the “Address / Host Name” field, select the IP address option and enter the static IP address you assigned to the sensor in chapter 6.2.
- 7.3.4.4 To set the “Connection Parameters” enter the following connection parameters field information:

Name	Instance field	Size field
Input assembly	101	50
Output assembly	100	–
Configuration assembly	10	20

Select the open module properties check box and click **OK**. The “Module Properties” window opens.

Fig. 121: New Module window

**7.4 Set Module RPI**

Click the “Connection” tab. Set the “Requested Packet Interval” (RPI) value and press **OK**. (The default value is 10 milliseconds, but the sensor is capable of a RPI as low as 2 milliseconds).

Fig. 122: Module properties window

**NOTICE**

- RPI limitations are:**
- 2 ms up to 4800 mm stroke
  - 4 ms up to 7620 mm stroke

**7.5 Verify Generic Ethernet Module**

Verify that the new sensor is listed in the “I/O Configuration tree”.

Fig. 123: New generic module has been added to the network

**7.6 Controller tags configuration data**

**7.6.1** In the “I/O Configuration tree”, click to open the “Controller Tags” directory. The controller tag table displays in the left pane (Fig. 124). The description column fields will be blank by default.

Fig. 124: Device control tags

**7.6.2** In the “Style” column, change the field data default from hex to decimal.

7.6.3 Locate Data Byte [0] through [5] In the “Name” column. In the “Description” column, enter the following Data Byte field information.

Name	Description	Values	Description
<b>Data Byte [0]</b>	Data format	0	4 bytes signed position, 4 bytes signed velocity (repeats for each magnet)
		1	4 bytes signed position (repeats for each magnet)
		2	4 bytes signed velocity (repeats for each magnet)
		3	(default value) First 4 bytes are status. Then repeating for each magnet: 4 bytes signed position, 4 bytes signed velocity. The 4 status bytes are defined as follows: <ul style="list-style-type: none"> <li>• Lower byte (bits 0 – 7) = Status <ul style="list-style-type: none"> <li>• Bit 0 = Magnet missing (0 = magnet not missing, 1 = magnet missing)</li> <li>• Bit 1 = CPU Watchdog (0 = not triggered, 1 = triggered)</li> <li>• Bits 2 – 7 = Not used</li> </ul> </li> <li>• Middle 2 bytes (bits 8 – 23) = Unused</li> <li>• Upper byte (bits 24 – 31) = Number of magnets found on the sensor</li> </ul>
<b>Data Byte [1]</b>	Resolution	0	0.001 mm (default value, also the same as value = 1)
		1	0.001 mm
		2	0.002 mm
		5	0.005 mm
		10	0.010 mm
		20	0.020 mm
		50	0.050 mm
		100	0.100 mm
		200	0.200 mm
		500	0.500 mm
<b>Data Byte [2]</b>	Measuring direction	0	Forward (values increasing from sensor electronics housing to rod end/profile end) (default value)
		1	Reverse (values decreasing from sensor electronics housing to rod end/profile end )
<b>Data Byte [3]</b>	Number of magnets	0	Used to detect missing magnets on the sensor. If “Value” = 0, the sensor determines the number of magnets present on the sensor at the startup. This number is used as a reference for detecting missing magnets. A missing magnet is displayed in the status (see Data format) and via the LEDs on the lid of the sensor (“5.2 LED status” on page 76).
<b>Data Byte [4]</b>	Velocity window size	1...1000	Setting of the number of position values for determining the velocity of the position magnet. The larger the number the more accurate the velocity and the slower the sensor reacts to a change in the velocity. (default value: 1).
<b>Data Byte [5]</b>	Number of averages	0...100	Setting the number of position values for calculation the filter of the output value. The filter is used to smooth the measured position value before output and can be helpful in a noisy environment. (default value: 1, no filter).

## 7.7 Controller tags input data

Fig. 125 illustrates an example of “Controller Tags” information based on the factory default configuration:

Fig. 125: Controller tags

“Controller Tags” information examples based on the factory default configuration are as follows:

- **Run/Idle Header**

Data[0] is always the Run/Idle header. This is not required by the EtherNet/IP™ standard, but it is highly recommended. It can be used by the end user to determine if the system is in Run or Idle mode.

- **Magnet Data**

The remaining data is laid out according to the data format selected in the configuration. Fig. 125 shows the position data for magnet 1 in Data[1], and the velocity for magnet 1 in Data[2].

- Magnet data – Position

The position data for magnet one in this example is 100887. This number multiplied by the resolution (*default = 0.001 mm*) gives the position:

$$\text{Position} = 100887 \times 0.001 \text{ mm} = 100.887 \text{ mm}$$

- Magnet data – Velocity

The velocity data for magnet one in this example is 60113. The velocity resolution is always 0.001 mm/s.

$$\text{Velocity} = 60113 \times 0.001 \text{ mm/s} = 60.113 \text{ mm/s}$$

## 8. Maintenance and troubleshooting

### 8.1 Error conditions, troubleshooting

See chapter “5. Commissioning” on page 76.

### 8.2 Maintenance

The sensor is maintenance-free.

### 8.3 Repair

Repairs of the sensor may be performed only by Temposonics or a repair facility explicitly authorized by Temposonics. For return see chapter “2.6 Return” on page 5.

### 8.4 List of spare parts

No spare parts are available for this sensor.

### 8.5 Transport and storage

The conditions of transport and storage of the sensor match the operating conditions mentioned in this document.

## 9. Removal from service/dismantling

The product contains electronic components and must be disposed of in accordance with the local regulations.

## 10. Technical data

### 10.1 Technical data of Temposonics® RP5

Output				
Interface	EtherNet/IP™			
Data protocol	Encoder CIP device profile with CIP Sync™ and DLR capabilities			
Data transmission rate	100 MBit/s (maximum)			
Measured value	Position, velocity/option: Simultaneous multi-position and multi-velocity measurements up to 20 magnets			
Measurement parameters				
Resolution: Position	1...500 µm (selectable)			
Cycle time	Stroke length	≤ 2000 mm	≤ 4800 mm	≤ 6350 mm
	Cycle time	1.0 ms	2.0 ms	3.0 ms
Linearity deviation <sup>3</sup>	Stroke length	≤ 500 mm	> 500 mm	
	Linearity deviation	≤ ±50 µm	< 0.01 % F.S.	
	Optional internal linearity: Linearity tolerance (applies for the first magnet for multi-position measurement)			
	Stroke length	25...300 mm	300...600 mm	600...1200 mm
	Typical	± 15 µm	± 20 µm	± 25 µm
	Maximum	± 25 µm	± 30 µm	± 50 µm
Repeatability	< ±0.001 % F.S. (minimum ±2.5 µm) typical			
Hysteresis	< 4 µm typical			
Temperature coefficient	< 15 ppm/K typical			
Operating conditions				
Operating temperature	-40...+85 °C (-40...+185 °F)			
Humidity	90 % relative humidity, no condensation			
Ingress protection	IP67 (connectors correctly fitted)			
Shock test	150 g/11 ms, IEC standard 60068-2-27			
Vibration test	30 g/10...2000 Hz, IEC standard 60068-2-6 (excluding resonant frequencies)			
EMC test	Electromagnetic emission according to EN 61000-6-3 Electromagnetic immunity according to EN 61000-6-2 The RP5 sensors fulfill the requirements of the EMC directives 2014/30/EU, UKSI 2016 No. 1091 and TR CU 020/2011.			
Magnet movement velocity	Magnet slider: Maximum 10 m/s; U-magnet: Any; block magnet: Any			
Design/Material				
Sensor electronics housing	Aluminum (painted), zinc die-cast			
Sensor profile	Aluminum			
RoHS compliance	The used materials are compliant with the requirements of EU directive 2011/65/EU and EU regulation 2015/863 as well as UKSI 2022 No. 622 with amendments			
Stroke length	25...6350 mm (1...250 in.)			
Mechanical mounting				
Mounting position	Any			
Mounting instruction	Please consult the technical drawings on <a href="#">page 16</a>			
Electrical connection				
Connection type	2 × M12 female connectors (5 pin), 1 × M8 male connector (4 pin) or 2 × M12 female connectors (5 pin), 1 × M12 male connector (4 pin)			
Operating voltage	+12...30 VDC ±20 % (9.6...36 VDC); the RP5 sensors must be power supplied via an external Class 2 power source in accordance with the UL approval			
Power consumption	Less than 4 W typical			
Dielectric strength	500 VDC (DC ground to machine ground)			
Polarity protection	Up to -36 VDC			
Overvoltage protection	Up to 36 VDC			

3/ With position magnet # 252 182

## 10.2 Technical data of Temposonics® RH5

Output				
Interface	EtherNet/IP™			
Data protocol	Encoder CIP device profile with CIP Sync™ and DLR capabilities			
Data transmission rate	100 MBit/s (maximum)			
Measured value	Position, velocity/option: Simultaneous multi-position and multi-velocity measurements up to 20 magnets			
Measurement parameters				
Resolution: Position	1...500 µm (selectable)			
Cycle time <sup>4</sup>	Stroke length	≤ 2000 mm	≤ 4800 mm	≤ 7620 mm
	Cycle time	1.0 ms	2.0 ms	3.0 ms
Linearity deviation <sup>5</sup>	Stroke length	≤ 500 mm	> 500 mm	
	Linearity deviation	≤ ±50 µm	< 0.01 % F.S.	
	Optional internal linearity: Linearity tolerance (Applies for the first magnet for multi-position measurement)			
	Stroke length	25...300 mm	300...600 mm	600...1200 mm
	Typical	± 15 µm	± 20 µm	± 25 µm
	Maximum	± 25 µm	± 30 µm	± 50 µm
Repeatability	< ±0.001 % F.S. (minimum ±2.5 µm) typical			
Hysteresis	< 4 µm typical			
Temperature coefficient	< 15 ppm/K typical			
Operating conditions				
Operating temperature	-40...+85 °C (-40...+185 °F)			
Humidity	90 % relative humidity, no condensation			
Ingress protection	IP67 (connectors correctly fitted)			
Shock test	150 g/11 ms, IEC standard 60068-2-27			
Vibration test	30 g/10...2000 Hz, IEC 60068-2-6 (excluding resonant frequencies) / RH5-J: 15 g/10...2000 Hz, IEC standard 60068-2-6 (excluding resonant frequencies)			
EMC test	Electromagnetic emission according to EN 61000-6-3 Electromagnetic immunity according to EN 61000-6-2 The RH5 sensors fulfill the requirements of the EMC directives 2014/30/EU, UKSI 2016 No. 1091 and TR CU 020/2011.			
Operating pressure	350 bar (5,076 psi)/700 bar (10,153 psi) peak (at 10 × 1 min) for sensor rod, RH5-J: 800 bar (11,603 psi)			
Magnet movement velocity	Any			
Design/Material				
Sensor electronics housing	Aluminum (painted), zinc die-cast			
Sensor flange	Stainless steel 1.4305 (AISI 303)			
Sensor rod	Stainless steel 1.4306 (AISI 304L)/RH5-J: Stainless steel 1.4301 (AISI 304)			
RoHS compliance	The used materials are compliant with the requirements of EU directive 2011/65/EU and EU regulation 2015/863 as well as UKSI 2022 No. 622 with amendments			
Stroke length	25...7620 mm (1...300 in.)

Operating pressure	350 bar (5076 psi)/700 bar (10,153 psi) peak (at 10 × 1 min) for sensor rod			
Magnet movement velocity	Any			
Design/Material				
Sensor electronics housing	Stainless steel 1.4404 (AISI 316L)			
Sensor flange	Stainless steel 1.4404 (AISI 316L)			
Sensor rod	Stainless steel 1.4404 (AISI 316L)			
RoHS compliance	The used materials are compliant with the requirements of EU directive 2011/65/EU and EU regulation 2015/863 as well as UKSI 2022 No. 622 with amendments			
Stroke length	25...7615 mm (1...299.8 in.)			
Mechanical mounting				
Mounting position	Any			
Mounting instruction	Please consult the technical drawings on <a href="#">page 20</a>			
Electrical connection				
Connection type	2 × cable with M12 female connector (D-coded), 1 × cable			
Operating voltage	+12...30 VDC ±20 % (9.6...36 VDC); the RM5 sensors must be power supplied via an external Class 2 power source in accordance with the UL approval			
Power consumption	Less than 4 W typical			
Dielectric strength	500 VDC (DC ground to machine ground)			
Polarity protection	Up to -36 VDC			
Overvoltage protection	Up to 36 VDC			

#### 10.4 Technical data of Temposonics® RF5

Output						
Interface	EtherNet/IP™					
Data protocol	Encoder CIP device profile with CIP Sync™ and DLR capabilities					
Data transmission rate	100 MBit/s (maximum)					
Measured value	Position, velocity/option: Simultaneous multi-position and multi-velocity measurements up to 20 magnets					
Measurement parameters						
Resolution: Position	1...500 µm (selectable)					
Cycle time <sup>7</sup>	Stroke length	≤ 715 mm	≤ 2000 mm	≤ 4675 mm	≤ 10,000 mm	≤ 20,000 mm
	Cycle time	500 µs	1000 µs	2000 µs	4000 µs	8000 µs
Linearity deviation <sup>8</sup>	< ±0.02 % F.S. (minimum ±100 µm)					
Repeatability	< ±0.001 % F.S. (minimum ±2.5 µm) typical					
Hysteresis	< 4 µm typical					
Temperature coefficient	< 15 ppm/K typical					
Operating conditions						
Operating temperature	-40...+85 °C (-40...+185 °F)					
Humidity	90 % relative humidity, no condensation					
Ingress protection	IP68 (3 d/3 m) (connectors and flange correctly fitted)					
Shock test	100 g/6 ms, IEC standard 60068-2-27 (when guided in a support pipe, e.g. sensor rod HD/HL/HP)					
Vibration test	5 g/10...2000 Hz, IEC standard 60068-2-6 (excluding resonant frequencies) (when guided in a support pipe, e.g. sensor rod HD/HL/HP)					
EMC test	Electromagnetic emission according to EN 61000-6-3					
	Electromagnetic immunity according to EN 61000-6-2 With EMC-compliant installation, the RF5 sensors fulfill the requirements of EMC directives 2014/30/EU, UKSI 2016 No. 1091 and TR ZU 020/2011. <sup>9</sup>					
Magnet movement velocity	Any					
Design/Material						
Sensor electronics housing	Aluminum (painted), zinc die-cast					
Sensor flange	Stainless steel 1.4305 (AISI 303)					
Sensor rod	Stainless steel conduct with PU coating					
RoHS compliance	The used materials are compliant with the requirements of EU Directive 2011/65/EU and EU Regulation 2015/863 as well as UKSI 2022 No. 622 with amendments					
Stroke length	150...20,000 mm (6...787 in.)					
Mechanical mounting						
Mounting position	Any					
Mounting instruction	Please consult the technical drawings on <a href="#">page 22</a>					
Electrical connection						
Connection type	2 × M12 female connectors (5 pin), 1 × M8 male connector (4 pin) or 2 × M12 female connectors (5 pin), 1 × M12 male connector (4 pin)					
Operating voltage	+12...30 VDC ±20 % (9.6...36 VDC); the RF5 sensors must be power supplied via an external Class 2 power source in accordance with the UL approval					
Power consumption	Less than 4 W typical					
Dielectric strength	500 VDC (DC ground to machine ground)					
Polarity protection	Up to -36 VDC					
Overvoltage protection	Up to 36 VDC					

7/ These values refer to a single position measurement

8/ With position magnet # 251 416-2

9/ The flexible sensor element must be mounted in an appropriately shielded environment

## 10.5 Technical data of Temposonics® RFV

Output					
Interface	EtherNet/IP™				
Data protocol	Encoder CIP device profile with CIP Sync™ and DLR capabilities				
Data transmission rate	100 MBit/s (maximum)				
Measured value	Position, velocity/option: Simultaneous multi-position and multi-velocity measurements up to 20 magnets				
Measurement parameters					
Resolution: Position	1...500 µm (selectable)				
Cycle time	Stroke length	≤ 2000 mm	≤ 4675 mm	≤ 10,000 mm	≤ 20,000 mm
	Cycle time	1.0 ms	2.0 ms	4.0 ms	8.0 ms
Linearity deviation <sup>10</sup>	< ±0.02 % F.S. (minimum ±100 µm)				
Repeatability	< ±0.001 % F.S. (minimum ±2.5 µm) typical				
Hysteresis	< 4 µm typical				
Temperature coefficient	< 15 ppm/K typical				
Operating conditions					
Operating temperature	-40...+85 °C (-40...+185 °F)				
Humidity	90 % relative humidity, no condensation				
Ingress protection	IP30 (IP65 rating only for professional mounted guide pipe and if mating connectors are correctly fitted)				
Shock test	100 g/6 ms, IEC standard 60068-2-27				
Vibration test	5 g/10...2000 Hz, IEC standard 60068-2-6 (excluding resonant frequencies)				
EMC test	Electromagnetic emission according to EN 61000-6-3				
	Electromagnetic immunity according to EN 61000-6-2 With EMC-compliant installation, the RFV sensors fulfill the requirements of the EMC directives 2014/30/EU, UKSI 2016 No. 1091 and TR CU 020/2011. <sup>11</sup>				
Magnet movement velocity	Any				
Design/Material					
Sensor electronics housing	Aluminum (painted), zinc die-cast				
Sensor flange	Stainless steel 1.4305 (AISI 303)				
Sensor rod	Stainless steel conduit with PTFE coating				
RoHS compliance	The used materials are compliant with the requirements of EU directive 2011/65/EU and EU regulation 2015/863 as well as UKSI 2022 No. 622 with amendments				
Stroke length	150...20,000 mm (6...787 in.)

## 10.6 Technical data of Temposonics® RD5

Output				
Interface	EtherNet/IP™			
Data protocol	Encoder CIP device profile with CIP Sync™ and DLR capabilities			
Data transmission rate	100 MBit/s (maximum)			
Measured value	Position, velocity/option: Simultaneous multi-position and multi-velocity measurements up to 2 magnets			
Measurement parameters				
Resolution: Position	1...500 µm (selectable)			
Cycle time	Stroke length	≤ 2000 mm	≤ 4800 mm	5080 mm
	Cycle time	1.0 ms	2.0 ms	3.0 ms
Linearity deviation <sup>12, 13</sup>	Stroke length	≤ 500 mm	> 500 mm	
	Linearity deviation	≤ ±50 µm	< 0.01 % F.S.	
Repeatability	< ±0.001 % F.S. (minimum ±2.5 µm) typical			
Hysteresis	< 4 µm typical			
Temperature coefficient	< 15 ppm/K typical			
Operating conditions				
Operating temperature	Sensor electronics housing: -40...+85 °C (-40...+185 °F) Sensor rod with »J« type cable: -40...+120 °C (-40...+248 °F) (for stroke lengths up to 2540 mm (100 in.) and up to 105 °C (221 °F) for longer stroke lengths) Sensor rod with »K« type cable: -40...+85 °C (-40...+185 °F) Sensor rod with »W« type single wires: -40...+85 °C (-40...+185 °F)			
Humidity	90% relative humidity, no condensation			
Ingress protection	Sensor electronics housing: IP67 (with correctly mounted housing and connectors) Sensor rod with »J« or »K« type cable: IP67/IP69K Connector »G« or »S« type: IP67 (correctly mated), Connector »E« type: IP30 Sensor rod with »W« type single wires: IP67 Connector »W« type: IP67 (correctly mounted)			
Shock test	150 g/11 ms, IEC standard 60068-2-27			
Vibration test	30 g/10...2000 Hz, IEC standard 60068-2-6 (excluding resonant frequencies)			
EMC test	Electromagnetic emission according to EN 61000-6-3 Electromagnetic immunity according to EN 61000-6-2 The RD5 sensors fulfill the requirements of the EMC directives 2014/30/EU, UKSI 2016 No. 1091 and TR CU 020/2011 under the condition of an EMC compliant installation. <sup>14</sup>			
Operating pressure	350 bar (5076 psi)/700 bar (10,153 psi) peak (at 10 × 1 min) for sensor rod			
Magnet movement velocity	Any			
Design/Material				
Sensor electronics housing	Aluminum (painted), zinc die cast			
Sensor rod with flange	Stainless steel 1.4301 (AISI 304)			
RoHS compliance	The used materials are compliant with the requirements of EU Directive 2011/65/EU and EU Regulation 2015/863 as well as UKSI 2022 No. 622 with amendments			
Stroke length	25...2540 mm (1...100 in.) for pressure-fit flange »S« 25...5080 mm (1...200 in.) for all threaded flanges			

Technical data “Mechanical mounting” and “Electrical connection” on [page 96](#)

<sup>12</sup>/With position magnet # 251 416-2

<sup>13</sup>/For rod style »S« the linearity deviation can be higher in the first 30 mm (1.2 in.) of stroke length.

<sup>14</sup>/The cable between the sensor element and the sensor electronics housing must be mounted in an appropriately shielded environment

<b>Mechanical mounting</b>	
Mounting position	Any
Mounting instruction	Please consult the technical drawings on <a href="#">page 30</a> , <a href="#">page 32</a> and <a href="#">page 33</a>
<b>Electrical connection</b>	
Connection type	2 × M12 female connectors (5 pin), 1 × M12 male connector (4 pin) or 2 × M12 female connectors (5 pin), 1 × M8 male connector (4 pin)
Operating voltage	+12...30 VDC ±20 % (9.6...36 VDC); the RD5 sensors must be power supplied via an external Class 2 power source in accordance with the UL approval
Power consumption	Less than 4 W typical
Dielectric strength	500 VDC (DC ground to machine ground)
Polarity protection	Up to -36 VDC
Overvoltage protection	Up to 36 VDC

## 10.7 Technical data of Temposonics® RDV

Output				
Interface	EtherNet/IP™			
Data protocol	Encoder CIP device profile with CIP Sync™ and DLR capabilities			
Data transmission rate	100 MBit/s (maximum)			
Measured value	Position, velocity/option: Simultaneous multi-position and multi-velocity measurements up to 20 magnets			
Measurement parameters				
Resolution: Position	1...500 µm (selectable)			
Cycle time	Stroke length	≤ 2000 mm	≤ 4800 mm	5080 mm
	Cycle time	1.0 ms	2.0 ms	3.0 ms
Linearity deviation <sup>12, 13</sup>	Stroke length	≤ 500 mm	> 500 mm	
	Linearity deviation	≤ ±50 µm	< 0.01 % F.S.	
	Optional internal linearity: Linearity tolerance (applies for the first magnet for multi-position measurement)			
	Stroke length	25...300 mm	300...600 mm	600...1200 mm
	Typical	± 15 µm	± 20 µm	± 25 µm
	Maximum	± 25 µm	± 30 µm	± 50 µm
Repeatability	< ±0.001 % F.S. (minimum ±2.5 µm) typical			
Hysteresis	< 4 µm typical			
Temperature coefficient	< 15 ppm/K typical			
Operating conditions				
Operating temperature	-40...+85 °C (-40...+185 °F)			
Humidity	90 % relative humidity, no condensation			
Ingress protection	Sensor electronics: IP67 (with professional mounted housing and connectors) Measuring rod with connecting cable for side cable entry: IP65 Measuring rod with single wires and flat connector with bottom cable entry: IP30			
Shock test	100 g/11 ms, IEC standard 60068-2-27			
Vibration test	10 g/10...2000 Hz, IEC standard 60068-2-6 (excluding resonant frequencies)			
EMC test	Electromagnetic emission according to EN 61000-6-3 Electromagnetic immunity according to EN 61000-6-2 With EMC-compliant installation, the RDV sensors fulfill the requirements of the EMC directives 2014/30/EU, UKSI 2016 No. 1091 and TR CU 020/2011. <sup>14</sup>			
Operating pressure	350 bar (5076 psi)/700 bar (10,153 psi) peak (at 10 × 1 min) for sensor rod

## 11. Appendix I – Safety declaration

Dear Customer,

If you return one or several sensors for checking or repair, we need you to sign a safety declaration. The purpose of this declaration is to ensure that the returned items do not contain residues of harmful substances and/or that people handling these items will not be in danger.

Temposonics order code: \_\_\_\_\_ Sensor model(s): \_\_\_\_\_

Serial number(s): \_\_\_\_\_ Stroke length(s): \_\_\_\_\_

**The sensor has been in contact with the following materials:**

Do not specify chemical formulas.  
 Please include safety data sheets of the substances, if applicable.

In the event of suspected penetration of substances into the sensor, consult Temposonics to determine measures to be taken before shipment.

**Short description of malfunction:**

**Corporate information**

Company: \_\_\_\_\_

Address: \_\_\_\_\_

\_\_\_\_\_

**Contact partner**

Phone: \_\_\_\_\_

Fax: \_\_\_\_\_

Email: \_\_\_\_\_

We hereby certify that the measuring equipment has been cleaned and neutralized.  
 Equipment handling is safe. Personnel exposure to health risks during transport and repair is excluded.

## 12. Appendix II – Cylinder port details

### PORT DETAIL (PD) FOR RH5-S:

#### NOTES:

1. Dimensions and tolerances based on ANSI Y14.5-1982.
2. Temposonics has extracted all pertinent information from MS33649 to generate this document.
3. PD must be square with surface B within 0.005 FIM across 2.250 dia minimum.
4. PD must be concentric with 2.250 dia within 0.030 FIM and with 0.769 dia within 0.005 FIM.
5. Surface texture ANSI B46.1-1978
6. Use O-ring part number 560315 for correct sealing.
7. The thread design shall have sufficient threads to meet strength requirements of material used.
8. Finish counter-bore shall be free from longitudinal and spiral tool marks. Annular tool marks up to 32 microinches maximum will be permissible.

### PORT DETAIL (PD) FOR RH5-T:

#### NOTES:

1. If face of port is on a machined surface, dimensions 1.180 and 0.094 need not apply as long as R0.008/0.004 is maintained to avoid damage to the O-ring during installation.
2. Measure perpendicularity to A at this diameter.
3. This dimension applies when tap drill cannot pass through entire boss.
4. This dimension does not conform to SAE J1926/1.

## 13. Glossary

### C

#### **CIP Sync™**

Synchronization services in CIP (**C**ommon **I**ndustrial **P**rotocol) provide the increased control coordination to achieve real-time synchronization between distributed devices and systems. CIP Sync™ is compliant with IEEE-1588™ standard and allows synchronization accuracy between two devices of fewer than 100 nanoseconds.

### D

#### **DLR**

The **D**evice **L**evel **R**ing (DLR) protocol provides a means for detecting, managing and recovering from faults in a ring-based network.

### E

#### **EDS**

The properties and functions of an EtherNet/IP™ device are described in an EDS file (**E**lectronic **D**ata **S**heet). The XML-based EDS file contains all relevant data that are important for the implementation of the device in the controller as well as for data exchange during operation. The EDS file of the R-Series V EtherNet/IP™ is available on the homepage [www.temposonics.com](http://www.temposonics.com).

#### **EtherNet/IP™**

EtherNet/IP™ (**E**thernet **I**ndustrial **P**rotocol) is an Industrial Ethernet interface and is managed by the **O**pen **D**evice**N**et **V**endor **A**ssociation (ODVA). The R-Series V EtherNet/IP™ and its corresponding EDS file are certified by the ODVA.

### I

#### **Internal linearization**

The internal linearization offers an improved linearity for an overall higher accuracy of the position measurement. The internal linearization is set for the sensor during production.

### M

#### **Measuring direction**

When moving the position magnet, the position and velocity values increase in the measuring direction.

- Forward: Values increasing from sensor electronics housing to rod end/profile end
- Reverse: Values decreasing from sensor electronics housing to rod end/profile end

#### **Multi-position measurement**

During the measurement cycle, the positions of every magnet on the sensor are simultaneously reported. The velocity is continuously calculated based on these changing position values as the magnets are moved.
