G-Series V GH5 Analog

Magnetostrictive Linear Position Sensors

- Versatile output ranges for current or voltage output
- LED for visualization of the sensor status
- Field adjustments and diagnostics using the TempoLink® smart assistant

MEASURING TECHNOLOGY

The absolute, linear position sensors provided by Temposonics rely on the company's proprietary magnetostrictive technology, which can determine position with a high level of precision and robustness. Each Temposonics® position sensor consists of a ferromagnetic waveguide, a position magnet, a strain pulse converter and supporting electronics. The magnet, connected to the object in motion in the application, generates a magnetic field at its location on the waveguide. A short current pulse is applied to the waveguide. This creates a momentary radial magnetic field and torsional strain on the waveguide. The momentary interaction of the magnetic fields releases a torsional strain pulse that propagates the length of the waveguide. When the ultrasonic wave reaches the beginning of the waveguide it is converted into an electrical signal. Since the speed of the ultrasonic wave in the waveguide is precisely known, the time required to receive the return signal can be converted into a linear position measurement with both high accuracy and repeatability.

G-SERIES V GH5 Analog

The Temposonics® G-Series V brings very balanced sensor performance to meet the many demands of your application. The main advantages of the rod version GH5 with Analog output (current/voltage) are:

Infinite resolution

Due to an analog measuring method there is no quantization of the position value, therefore the resolution is infinite.

LED for sensor status

The LED in the housing cover visualizes the sensor status. This allows you to see the current status of the sensor at a glance.

Versatile output ranges

You can configure the analog output of the sensor for different output ranges to suit your application.

All settings under control with the smart assistant for the G-Series V

The TempoLink® smart assistant supports you in setup and diagnostics of the G-Series V. Among other things, you can adjust the setting points of the sensor to your application on site or read out information about the current status of the sensor.

For more information of the assistant please see the data sheet:
